2026

Introduction

The purpose of this work is to design and execute a test plan for the web application called "Terminal", developed in Phase 2 of the Web Development course. This system was built using technologies such as HTML, CSS, and JavaScript, and is aimed at providing users with information about the transportation terminal, including the services offered, the types of vehicles available, and the associated companies.

Additionally, the application allows users to perform quotation and ticket purchasing processes, facilitating the consultation of routes, dates, prices, and service categories (economy, executive, and premium). The system includes different modules such as main navigation, quotations, tickets, and contact, which were evaluated through the development of structured test cases.

In this context, a test plan was developed to verify the proper functioning of each component of the system, identifying possible errors and validating that the application meets the established functional requirements.

Test Plan – Terminal Project

1. Introduction

This test plan aims to define the activities required to verify the correct functioning of the Terminal website. This application was developed to allow users to consult terminal information, check associated companies, types of vehicles they operate, available services, view schedules, get travel quotes, and purchase tickets online.

The presented test plan will cover the validation of the main system modules, navigation between pages, form functionality, and the ticket quotation and purchase flow.

2. Test Items

The modules and components to be tested are:

- Home page
- Companies module
- Vehicles module
- Services module
- Contact module
- Quotations module
- Tickets module

3. Features to be Tested

The functionalities to be tested are:

- Display of general terminal information
- Consultation of associated companies
- Consultation of vehicle types
- Consultation of offered services
- Consultation of available schedules
- Data entry in forms
- Calculation of quotations considering origin, destination, travel date, return date (optional), number of passengers, and selected service type
- Search for available trips
- Selection of a trip for purchase
- Entry of passenger information
- Display of purchase summary
- Navigation between system pages

- Adaptation to different devices such as computers, phones, and tablets

4. Features Not to be Tested

The following features are out of scope for this test plan:

- Real-time database connection
- Advanced server security
- Load or stress testing
- Integration with payment gateways
- API testing
- External integrations not implemented in the project

5. Test Approach

The main approach of this test plan will be manual, using the following techniques:

- **Black box testing:** validating system inputs and outputs without analyzing the internal code
- **Functional testing:** verifying that each module behaves as expected
- **Form validation testing:** checking required fields, incorrect data, and field validations
- **Navigation testing:** ensuring links, buttons, and redirections work correctly
- **UI testing:** verifying that visual elements are displayed properly
- **Responsive testing:** ensuring the website works correctly on all devices (computers, phones, tablets)
- **Compatibility testing:** verifying behavior across different browsers (Chrome, Mozilla, Microsoft Edge)

6. Pass/Fail Criteria

A test will be considered **passed** when:

- The obtained result matches the expected result
- No issues affect the normal user flow
- The interface is displayed correctly
- The executed functionality works properly

A test will be considered **failed** when:

- The evaluated functionality does not meet the expected result
- Validation, navigation, or display errors occur

- The system prevents completing key processes such as quoting or purchasing a ticket
- Issues are found that affect the user experience

7. Suspension and Resumption Criteria

Testing may be **suspended** under the following conditions:

- The application does not load correctly
- Critical errors prevent continuation of the main flow
- Broken links or pages block navigation
- The testing environment presents technical issues

Testing may be resumed when:

- The detected error has been fixed
- The application becomes available again
- The main modules load correctly
- The necessary testing environment conditions are restored

8. Test Deliverables

The deliverables of this test plan include:

- Test plan document
- Test case list
- Test execution records
- Test evidence (e.g., screenshots)
- Defect/incident report
- Final test results

9. Schedule

The proposed schedule for testing activities is:

- Week 1: Application analysis and scope definition
- Week 2: Test plan design
- Week 3: Test case creation
- Week 4: Functional and validation testing
- Week 5: Navigation, UI, and compatibility testing
- Week 6: Incident reporting and adjustments
- Week 7: Results consolidation and final delivery

10. Resources and Responsibilities

Human Resources

- **Student/Tester:** responsible for designing, executing, and documenting tests
- **Instructor/Tutor:** responsible for reviewing and validating the test plan

Technological Resources

- Web browsers: Chrome, Mozilla, Microsoft Edge
- Internet connection
- GitHub repository
- Desktop or laptop computer, phone, and tablet
- Screenshot tools
- Microsoft Word for documenting results

11. Risks and Contingencies

Potential Risks

- Page loading failures
- Forms with incomplete validations
- Errors in the quotation or purchase flow
- Display issues on mobile devices
- Differences in behavior between browsers
- Broken links or incorrect navigation

Contingencies

- Record the detected error with evidence
- Repeat the test after correction
- Test on another browser or device
- Adjust the execution plan if critical failures occur
- Prioritize validation of the main system modules

12. Approval

Name: Liseth Dayana Monroy Briñez

Date: March 25, 2026

Test case author: Liseth Dayana Monroy Briñez

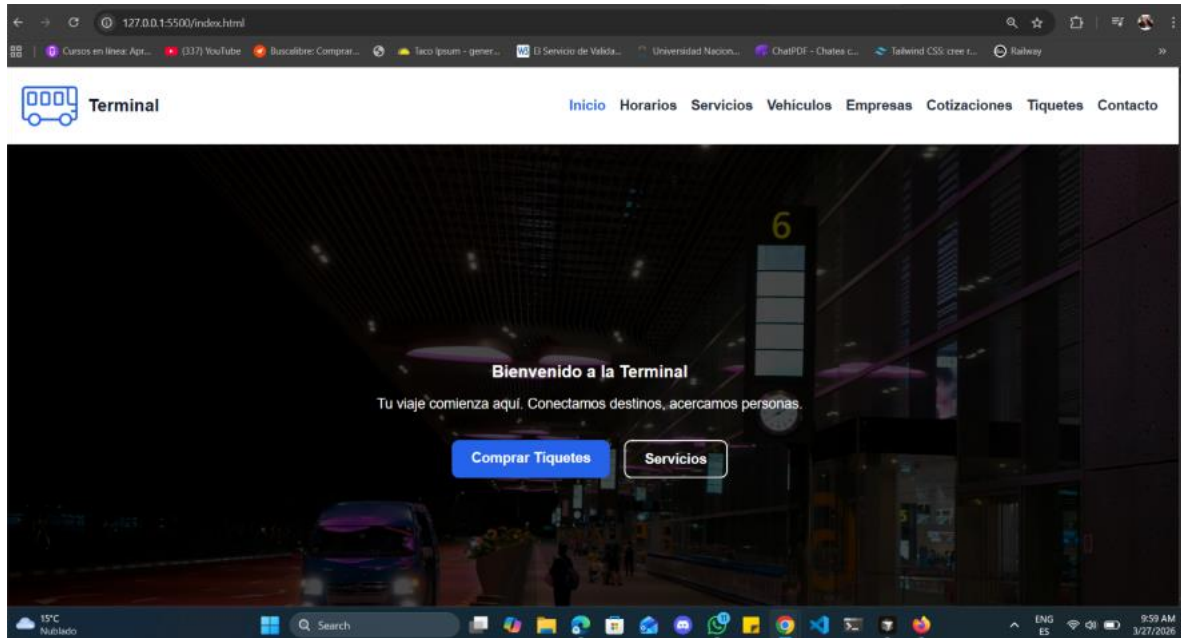

Table 1**Test Cases Terminal**

Field	Home Page Load
Test Case ID	TC-HOME-001
Test Case Name	Verify the correct loading of the home page in Chrome, Mozilla, and Microsoft Edge.
Objective	Verify that the main page correctly loads the terminal information.
Preconditions	Have the "Terminal" project downloaded locally, open the project in a code editor (Visual Studio Code, SublimeText, Cursor, or your preferred one), and install the dependencies to run the project.
Test Data	Not applicable.
Test Steps	1. Download the "Terminal" project to your computer. 2. Open the folder in your preferred code editor. 3. Open the terminal in the code editor. 4. Install the project dependencies using "npm install". 5. Locate the file index.html and click on Open with Live Server. 6. Select the Chrome browser. 7. Verify the loading. 8. Select the Mozilla browser. 9. Verify the loading. 10. Select the Microsoft Edge browser. 11. Verify the loading.
Expected Result	The home page loads correctly in all three browsers, displaying the page menu and the terminal information.
Actual Result	When accessing the three browsers, the page loaded correctly, and the terminal information and menu were displayed.
Status (Pass/Fail)	Approved.

Comments

It was observed that when loading in Mozilla and Microsoft Edge, it takes 3 additional seconds to display the main image on the home page.

Test Evidence

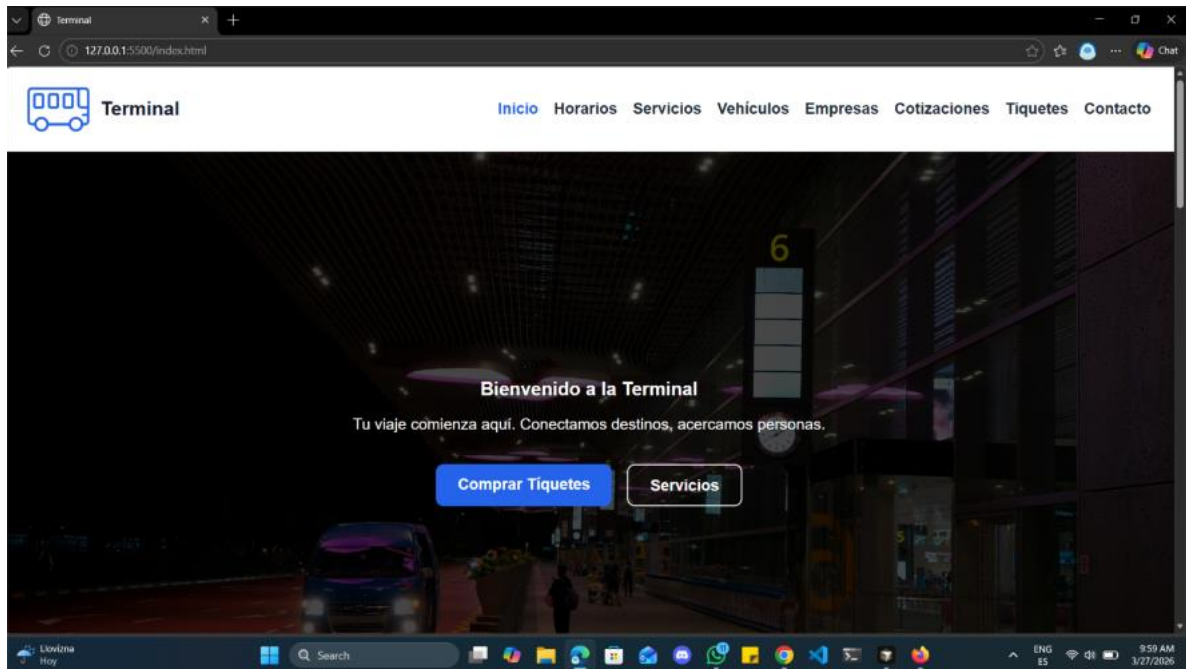

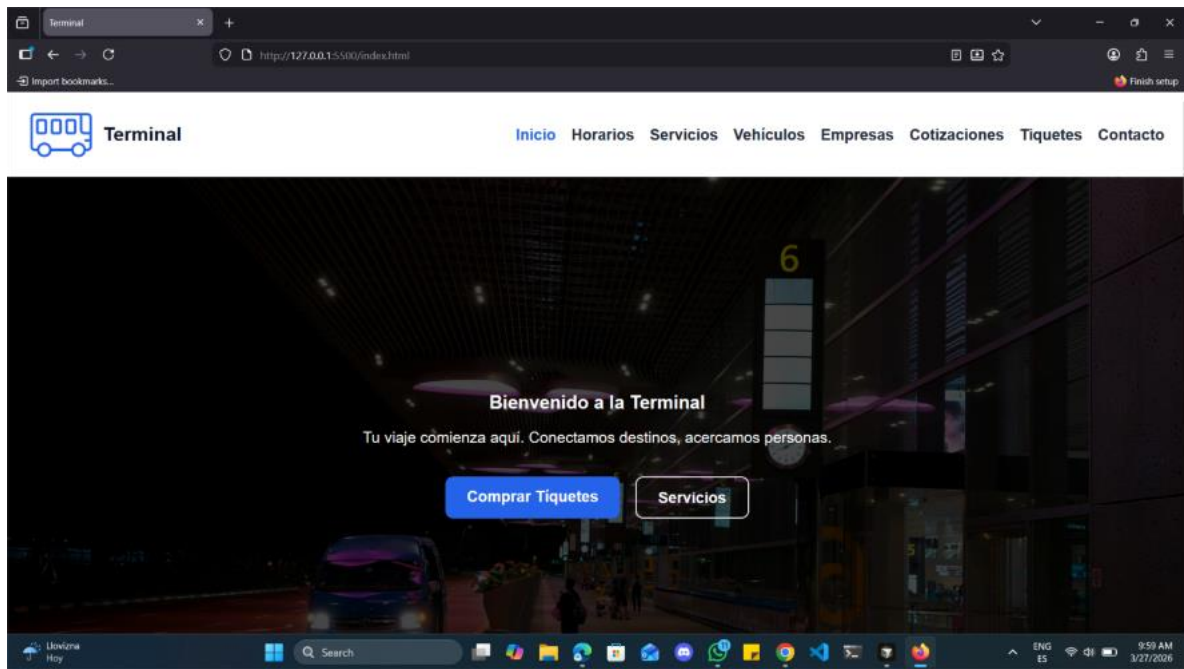

Table 2**Test Cases Terminal**

Field	Main Menu Navigation
Test Case ID	TC-NAV-002
Test Case Name	Verify the navigation of the main menu.
Objective	Verify that clicking redirects correctly to each module.
Preconditions	The user must be on the main page.
Test Data	Not applicable.
Test Steps	1. Open the main page in the browser. 2. Click on the "Schedules" module. 3. Verify that the information is correct. 4. Click on the "Services" module. 5. Verify that the information is correct. 6. Click on the "Vehicles" module. 7. Verify that the information is correct. 8. Click on the "Companies" module. 9. Verify that the information is correct. 10. Click on the "Quotes" module. 11. Verify that the information is correct. 12. Click on the "Tickets" module. 13. Verify that the information is correct. 14. Click on the "Contact" module. 15. Verify that the information is correct.
Expected Result	The main menu navigation works correctly.
Actual Result	Each menu option opens the corresponding page correctly.
Status (Pass/Fail)	Approved
Comments	Interaction with the main menu was fast, and no errors were observed.

Table 4

Test Cases Terminal

Field	Vehicle display
Test Case ID	TC-VEH-004
Test Case Name	Verify vehicle display
Objective	Verify that the available vehicle types are displayed
Preconditions	Access the terminal website
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the "Vehicles" module 3. Verify the available vehicle types
Expected Result	The available vehicles are displayed correctly
Actual Result	The available vehicles are displayed correctly
Status (Pass/Fail)	Passed
Comments	The information displayed in the "Vehicles" module is correct

Test Evidence

The screenshot displays a web browser window with multiple tabs open. The active tab shows a website for 'Terminal' with a 'Vehiculos' section. The page has a blue header with the title 'Nuestra Flota de Vehículos' and a subtitle 'Contamos con una amplia variedad de vehículos modernos y seguros'. Below the header, there are four white boxes, each containing an icon and a feature:

- Capacidad Variable**: Desde 4 hasta 50 pasajeros
- Última Tecnología**: Vehículos modelo 2023-2024
- Máxima Seguridad**: Mantenimiento preventivo constante
- Conectividad**: WiFi disponible en buses

Below these boxes, there is a large image of a Mercedes-Benz Actros 2551 truck. To the right of the image, the following text is displayed:

Camión Carga hasta 25 toneladas

Mercedes-Benz Actros 2551

Vehículo de carga pesada ideal para transporte de mercancías voluminosas y pesadas a larga distancia.

Características Principales:

- Motor diésel de alta potencia
- Sistema de frenos ABS
- Cabina ergonómica
- GPS y rastreo satelital

19

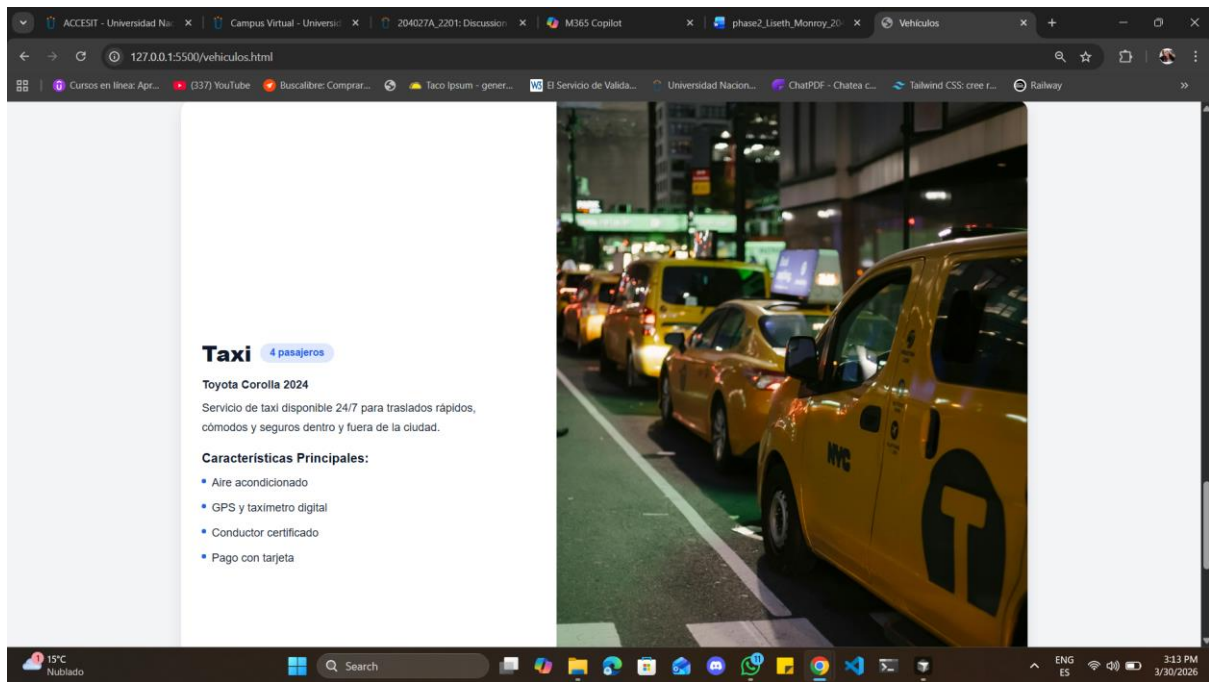

Table 5

Test Cases Terminal

Field	Terminal services and policies
Test Case ID	TC-SERV-005
Test Case Name	Offered services and terminal policies
Objective	Verify the services offered and the terminal policies
Preconditions	Access the terminal website
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the "Services" module 3. Review the module content
Expected Result	The terminal services and policies are displayed correctly
Actual Result	The terminal services and policies are displayed correctly
Status (Pass/Fail)	Passed

Comments

The information in the services module is correct

Test Evidence

The screenshot displays a web browser window with the URL `127.0.0.1:5500/servicios.html`. The browser's address bar shows several tabs, including 'ACCESIT - Universidad Na...', 'Campus Virtual - Univers...', '204027A_2201: Discusio...', 'M365 Copilot', 'phase2_Liseth_Monroy_20...', and 'Servicios'. The website's header features a 'Terminal' logo and a navigation menu with links: 'Inicio', 'Horarios', 'Servicios', 'Vehiculos', 'Empresas', 'Cotizaciones', 'Tiquetes', and 'Contacto'. The main content area is titled 'Nuestros Servicios' with the subtitle 'Comodidad y conveniencia en cada etapa de tu viaje'. Below this, a section titled 'Servicios en el Terminal' presents eight service cards in a 2x4 grid:

- WiFi Gratis**: Conexión a internet de alta velocidad en todas nuestras instalaciones y unidades.
- Cafetería**: Cafetería abierta 24/7 con variedad de bebidas calientes, frías y snacks.
- Restaurante**: Restaurante con menú variado, comida rápida y opciones saludables.
- Tiendas**: Tiendas de conveniencia para tus necesidades de último momento.
- Estacionamiento**: Amplio estacionamiento vigilado disponible las 24 horas.
- Cajeros Automáticos**: Cajeros automáticos disponibles en el terminal.
- Sala de Bebés**: Área especial equipada para el cuidado de bebés y niños pequeños.
- Accesibilidad**: Instalaciones completamente accesibles para personas con movilidad reducida.

The browser's status bar at the bottom indicates a temperature of 15°C, a 'Nublado' (Cloudy) weather condition, and the time 3:19 PM on 3/30/2026.

Políticas del Terminal

Normas y reglamentos para garantizar la seguridad y comodidad

Políticas de Cancelación y Reembolsos

Cancelación con Reembolso Completo
Cancelaciones realizadas con más de 24 horas de anticipación a la hora de salida tienen derecho al 100% del valor.

Cancelación con Penalidad
Entre 2 y 6 horas antes de la salida se descontará el 25% del valor del ticket. En este caso se reembolsará el 75%.

Sin Reembolso
Cancelaciones realizadas con menos de 2 horas antes de la salida no aplican para devolución.

Cambios de Fecha u Horario
Se permiten cambios con mínimo 4 horas de anticipación y están sujetos a disponibilidad y una tarifa administrativa.

Nota:

- Todos los reembolsos se procesan en un plazo de 5 a 10 días hábiles al método de pago original.

Políticas para Menores de Edad

Menores de 7 Años
Deben viajar acompañados de un adulto responsable mayor de 18 años. Todas las tarifas del viaje son siempre iguales al adulto.

Entre 7 y 12 Años
Pueden viajar solos con autorización notariada de sus padres o tutores. Deben presentar documento de identidad del menor y del adulto autorizado.

Mayores de 12 Años
Pueden viajar solos presentando su documento de identidad. Para menores de 18 años se recomienda autorización.

Documentos Requeridos

- Registro civil o tarjeta de identidad del menor.
- Autorización notariada de viaje para menores entre 7 y 12 años.
- Documento del adulto acompañante.

Política Detallada de Equipaje

Equipaje Permitido Sin Cargo
Equipaje de mano: 1 pieza con peso máximo de 10 kg y dimensiones máximas de 56x35x25 cm. Equipaje en bodega: 1 pieza de hasta 25 kg.

Equipaje con Cargo Adicional
Sobrepeso entre 26 y 35 kg tendrá costo adicional. Equipaje extra también genera cobro según la empresa transportadora.

Artículos Prohibidos
Materiales inflamables, explosivos, sustancias tóxicas, armas sin permiso legal y objetos punzocortantes inseguros.

Importante

- El terminal y las empresas no se hacen responsables por objetos de valor dejados en el equipaje de bodega.

Política de Transporte de Mascotas

Mascotas Pequeñas (hasta 10 kg)
Pueden viajar en gucal dentro del vehículo si no representan riesgo para los demás pasajeros.

Mascotas Medianas/Grandes (más de 10 kg)
Su transporte depende de la política de la empresa y del tipo de vehículo. Deben portar bozal si aplica y esquema de vacunación al día.

Documentos Requeridos

- Carnet de vacunación al día.
- Certificado de salud veterinario vigente.
- Guacal o correa según el tipo de mascota.

Nota

- Algunas empresas permiten únicamente animales de soporte emocional con documentación vigente.

Normas de Comportamiento y Seguridad

Conducta Requerida

- Conservar el respeto hacia pasajeros y personal.
- Seguir las indicaciones del personal de la terminal.
- Mantener el orden y la limpieza en las instalaciones.
- Reportar objetos sospechosos o situaciones de riesgo.

Conducta Prohibida

- Consumir bebidas alcohólicas o sustancias psicoactivas.
- Ingresar armas sin autorización legal.
- Agredir física o verbalmente a otras personas.
- Obstruir pasillos o salidas de emergencia.

ENG ES3:19 PM 3/30/2026

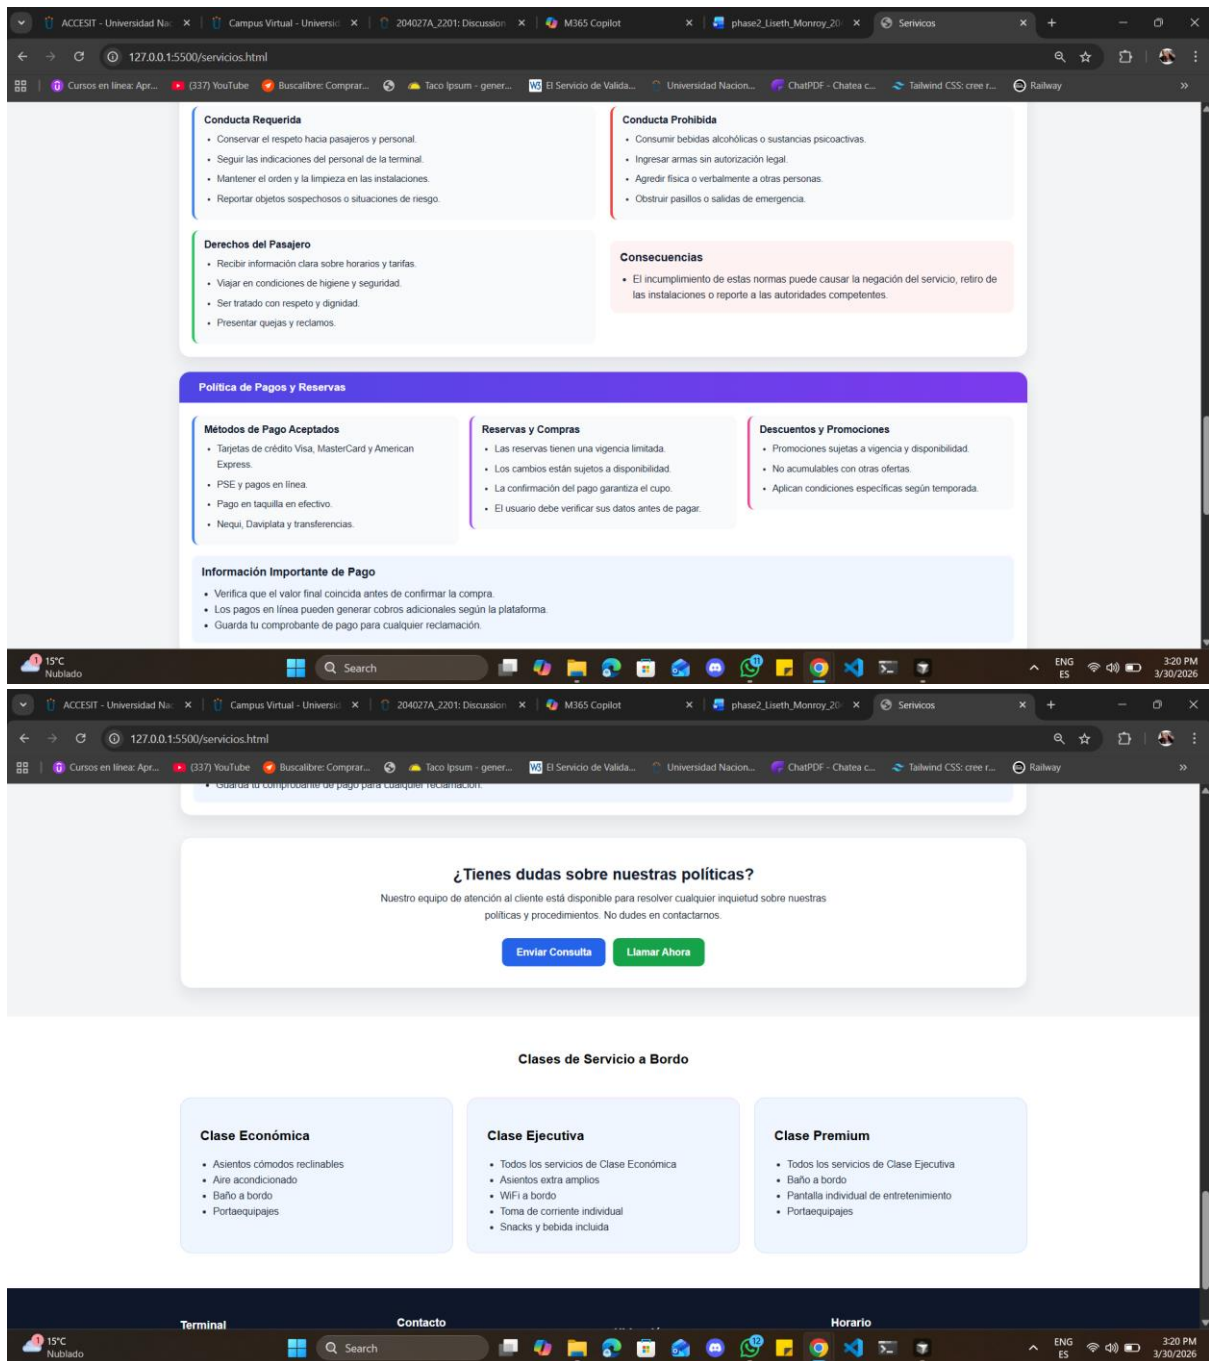

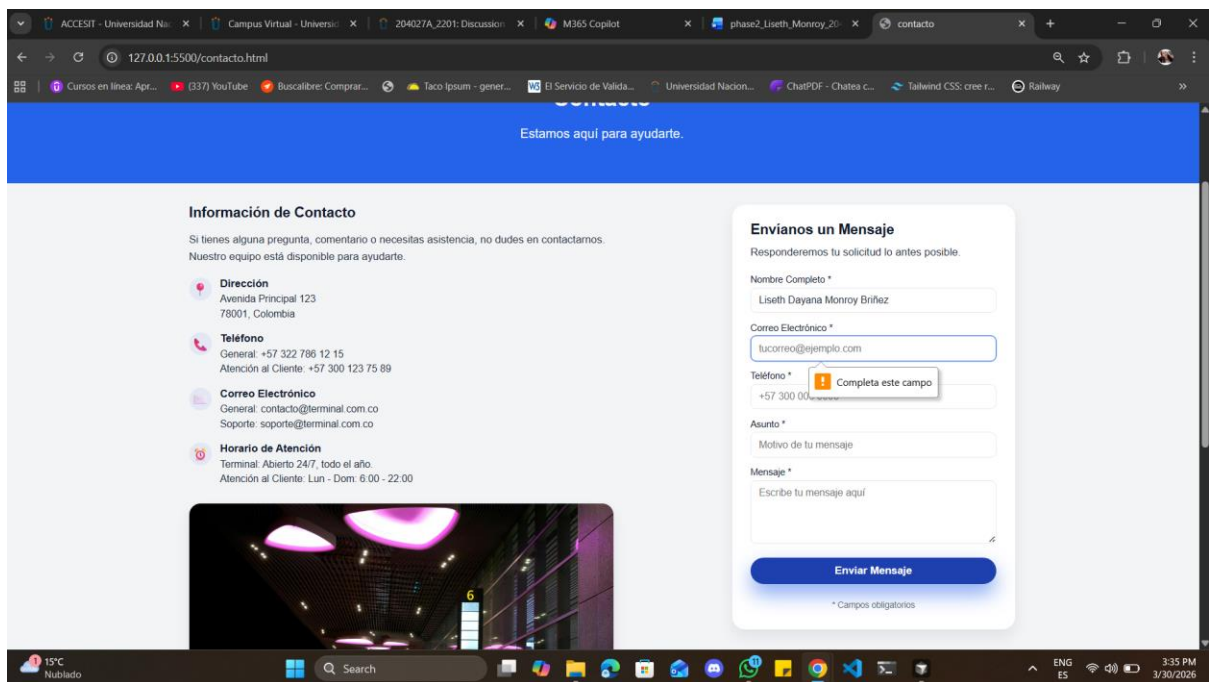

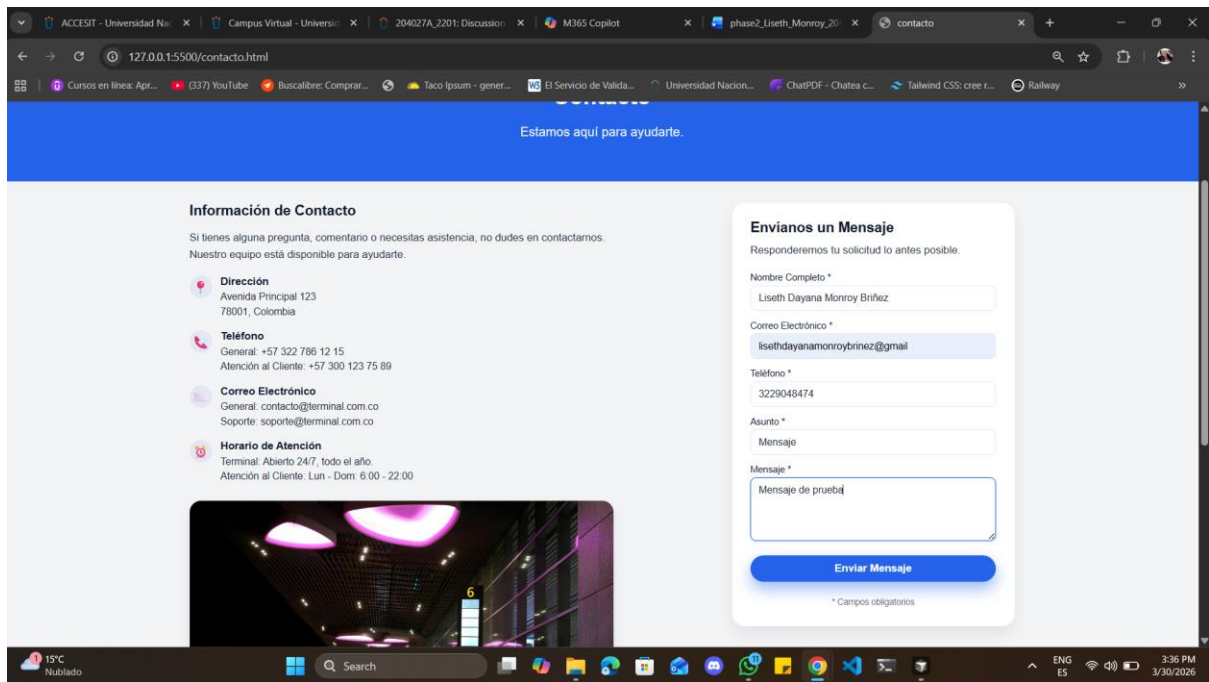

Table 6

Test Cases Terminal

Field	Verify contact form fields
Test Case ID	TC-CONT-006
Test Case Name	Contact form field validation

Objective	Perform tests to verify that the form fields have correct validations
Preconditions	Access the terminal website; the user must be located in the contact module
Test Data	Not applicable
Test Steps	1. Go to the Contact module 2. Try entering numbers in a text field (e.g., name) 3. Try entering letters in a numeric field (e.g., phone) 4. Leave one or more required fields empty 5. Click the "Send message" button 6. Fill in all fields correctly 7. Click the "Send message" button again
Expected Result	The system must correctly validate the form fields, allowing only alphabetic characters in text fields and only numeric values in numeric fields. Additionally, it must not allow the form to be submitted if there are required fields left empty. When all fields are correctly filled and the user clicks the "Send message" button, the system must display a successful submission confirmation message and automatically clear the form.
Actual Result	The system properly validates the form fields
Status (Pass/Fail)	Passed
Comments	Record whether the system allows incorrect data entry or fails to display the confirmation message

Test Evidence

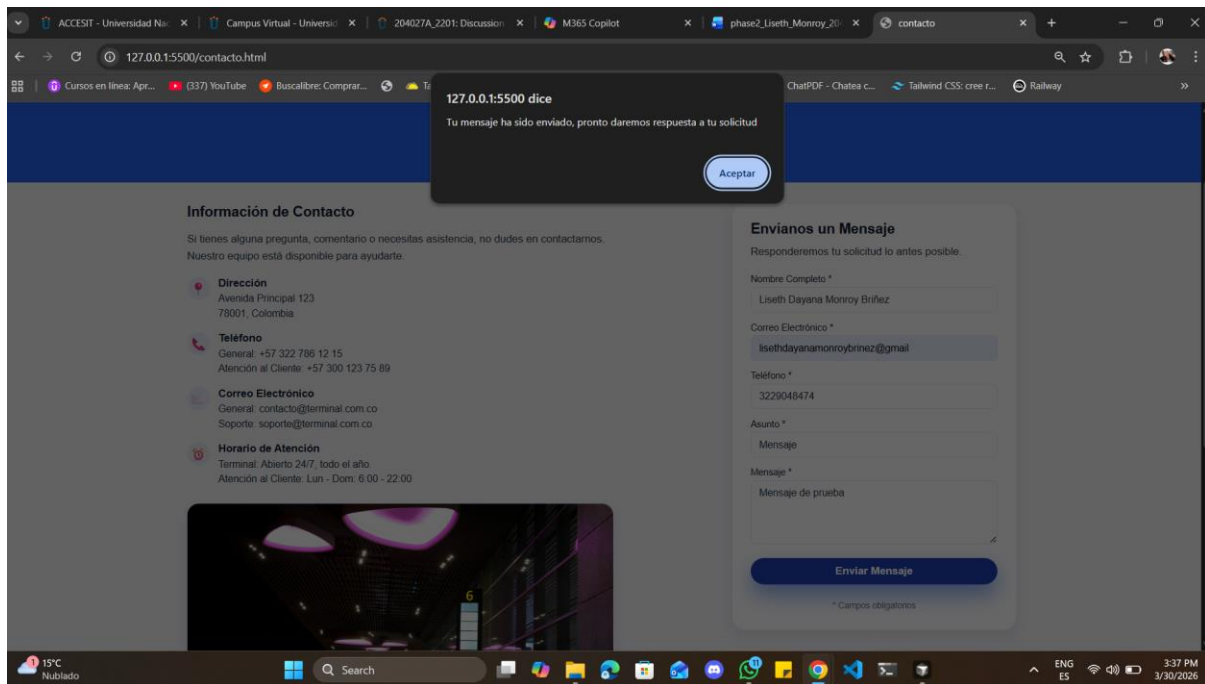

Table 7

Test Cases Terminal

Field	Validate form submission with empty required fields
Test Case ID	TC-CONT-007
Test Case Name	Verification of submission with empty fields in the "Contact" form
Objective	Verify that the system does not allow form submission when required fields are not filled
Preconditions	Access the terminal website; the user must be in the contact module
Test Data	Not applicable
Test Steps	1. Go to the Contact module 2. Leave all fields empty 3. Click the "Send message" button
Expected Result	The system must not allow form submission when required fields are empty and must display a validation message indicating that the fields must be completed

Actual Result	A message is displayed indicating that the fields must be completed
Status (Pass/Fail)	Passed
Comments	Verify whether the system displays clear error messages to the user

Test Evidence

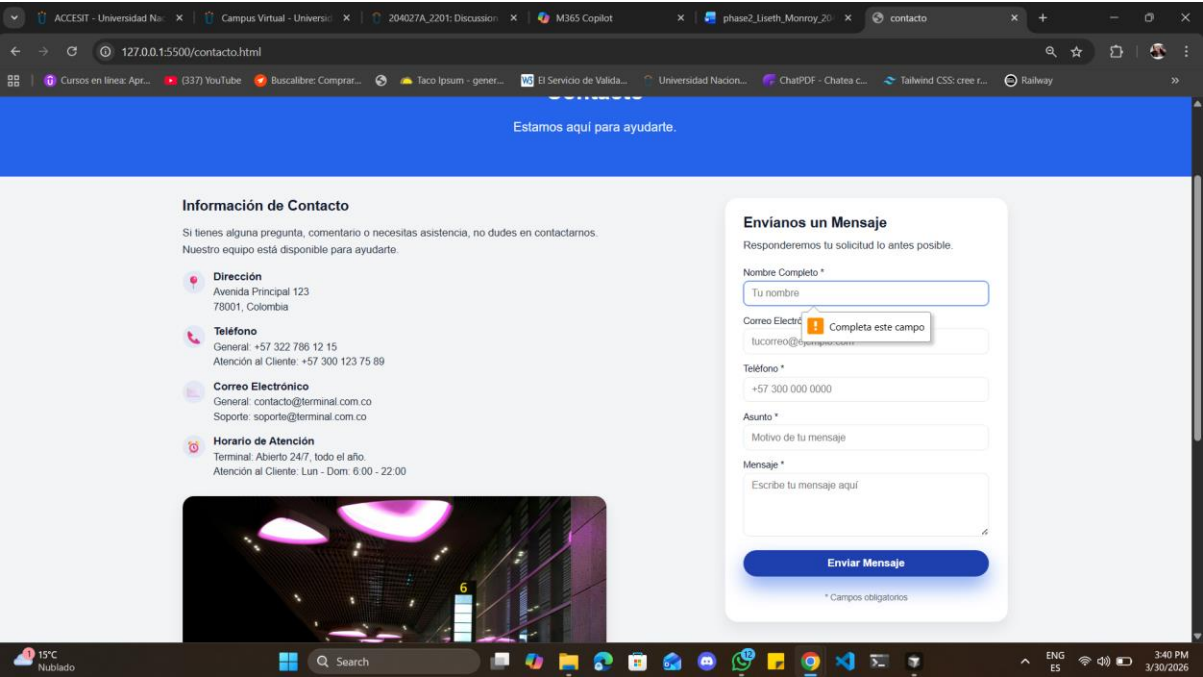

Table 8

Test Cases Terminal

Field	Validate email format
Test Case ID	TC-CONT-008
Test Case Name	Email field format verification

Objective	Verify that the system correctly validates the email format
Preconditions	Access the terminal website; the user must be in the contact module
Test Data	lisethdayanamonroybrinez@gmail.com
Test Steps	1. Enter the terminal website 2. Go to the Contact module 3. Fill in all fields correctly except the email 4. Enter an invalid email address 5. Click the "Send message" button
Expected Result	The system must validate the email format and must not allow form submission if the entered email is invalid, displaying an error message
Actual Result	The system does not properly validate the email field, and when incorrect data is entered, it still allows the form to be submitted
Status (Pass/Fail)	Failed
Comments	Verify whether the system correctly detects incorrectly formatted email addresses

Test Evidence

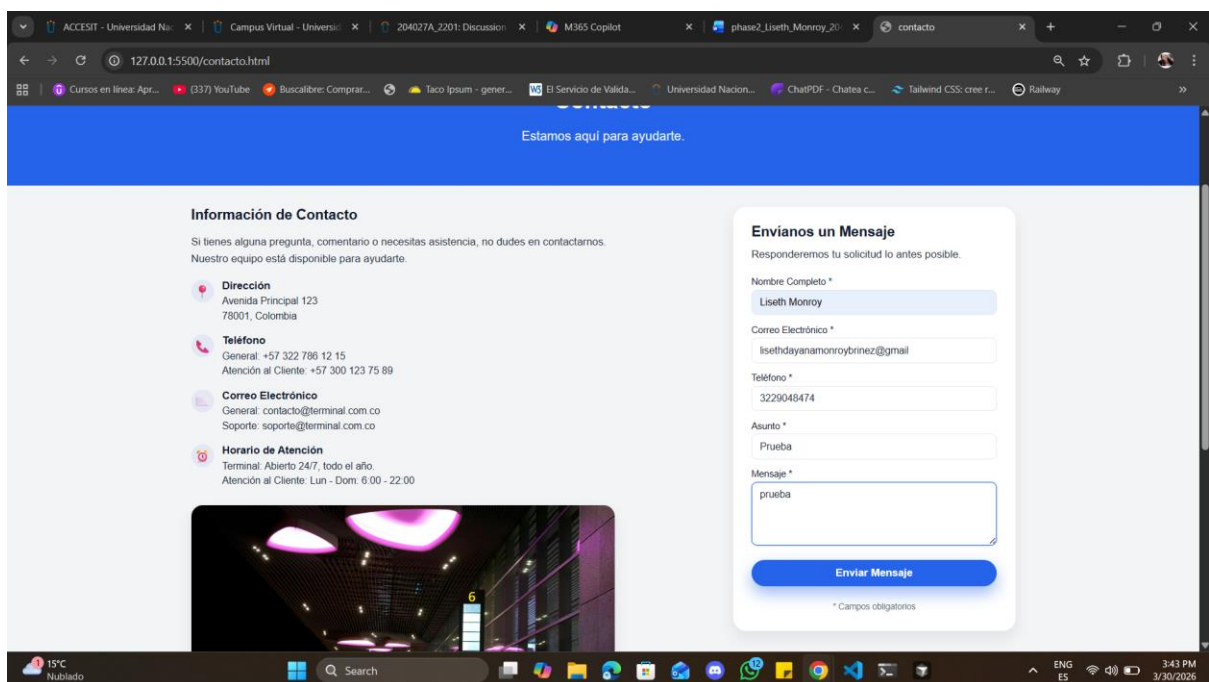

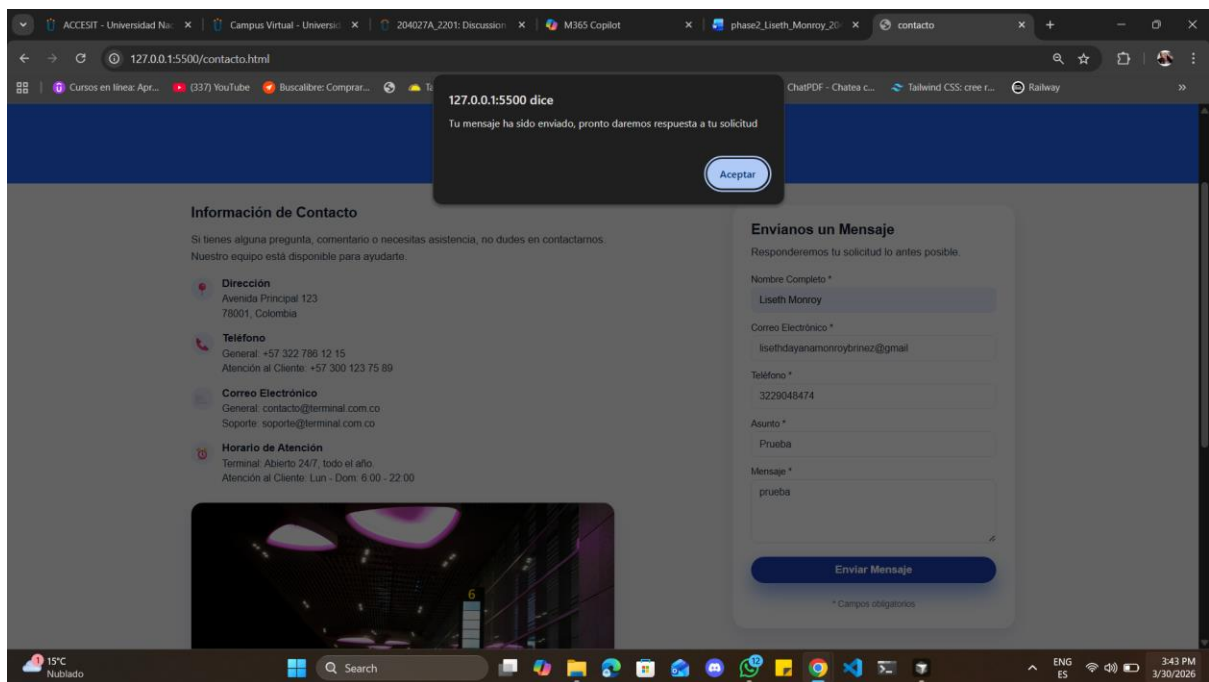

Table 9

Test Cases Terminal

Field	Validate automatic form reset
Test Case ID	TC-CONT-009
Test Case Name	Form reset verification after submission

Objective	Verify that the form is automatically cleared after a successful submission
Preconditions	Access the terminal website; the user must be in the contact module
Test Data	Valid data in all fields
Test Steps	1. Enter the terminal website 2. Go to the Contact module 3. Complete all fields correctly 4. Click the "Send message" button 5. Observe the form behavior after submission
Expected Result	The system must display a successful submission confirmation message and then automatically clear all form fields
Actual Result	After clicking the "Send message" button, a message appears indicating that the message has been sent, and the form fields are cleared
Status (Pass/Fail)	Passed
Comments	Verify that all fields are empty after submission

Test Evidence

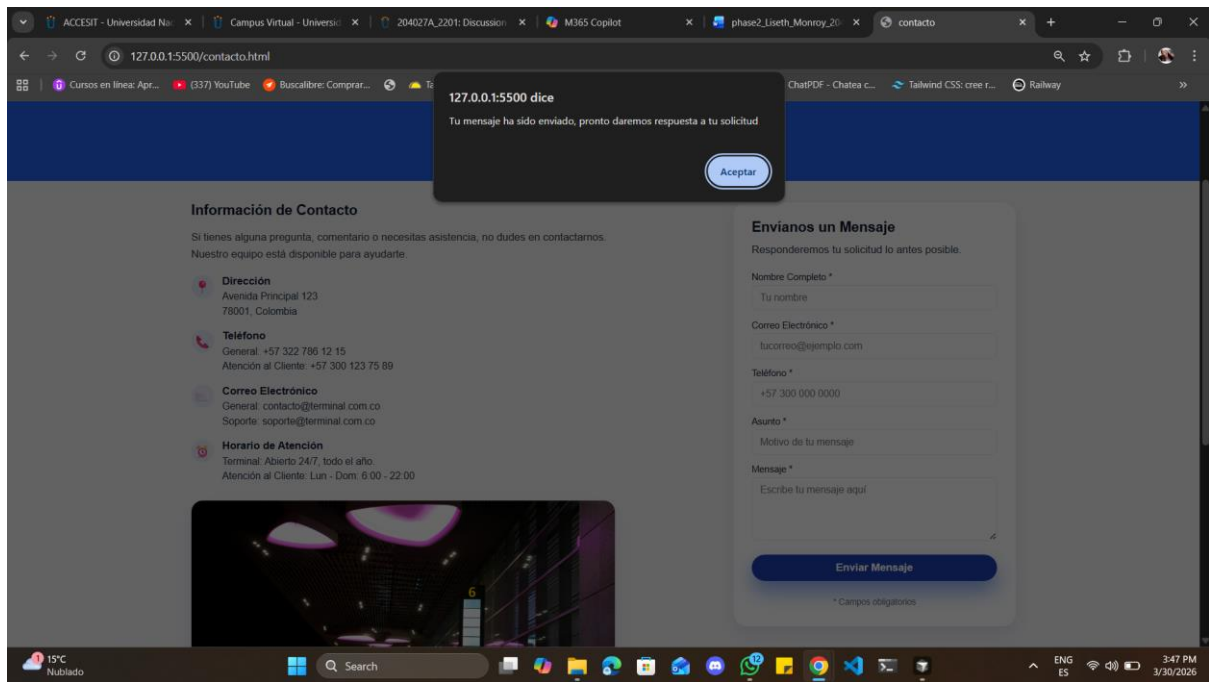

Table 10

Test Cases Terminal

Field	Verify the functionality of the travel quotation form
Test Case ID	TC-COT-010
Test Case Name	Quotation calculation verification with valid data
Objective	Perform tests to verify that the quotation form works correctly when entering valid data and displays the expected result
Preconditions	Access the terminal website; the user must be in the Quotations module
Test Data	Origin: Bogotá Destination: Medellín Departure date: 04/10/2026 Return date: 04/12/2026 Number of passengers: 2 Service type: Executive
Test Steps	1. Enter the terminal website 2. Go to the Quotations module 3. Select the origin 4. Select the destination

	5. Enter the departure date 6. Enter the return date (optional) 7. Enter the number of passengers 8. Select the service type 9. Click the "Calculate quotation" button
Expected Result	The system must allow correct data entry in each form field When clicking the "Calculate quotation" button, the system must display a trip summary or the estimated quotation value, including information such as origin, destination, dates, number of passengers, and selected service type
Actual Result	The system allows correct data entry in each form field, and when clicking "Calculate quotation", it displays a trip summary and quotations from different companies, including information such as origin, destination, dates, number of passengers, and service type
Status (Pass/Fail)	Passed
Comments	Verify that the displayed information matches the entered data and that there are no errors in the calculation or visualization

Table 11

Test Cases Terminal

Field	Validate required fields in the quotation form
Test Case ID	TC-COT-011
Test Case Name	Empty fields verification in the "Quotations" form
Objective	Perform tests to verify that the quotation form does not allow calculating a quotation when required fields are not filled
Preconditions	Access the terminal website; the user must be in the Quotations module
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the Quotations module 3. Leave one or more required fields empty 4. Click the "Calculate quotation" button

Expected Result	The system must not allow quotation calculation when required fields are empty and must display a validation message or prevent the process from continuing
Actual Result	The system does not allow continuing with the quotation if all required data is not entered
Status (Pass/Fail)	Passed
Comments	Verify whether the system displays clear error messages or properly blocks the action

Test Evidence

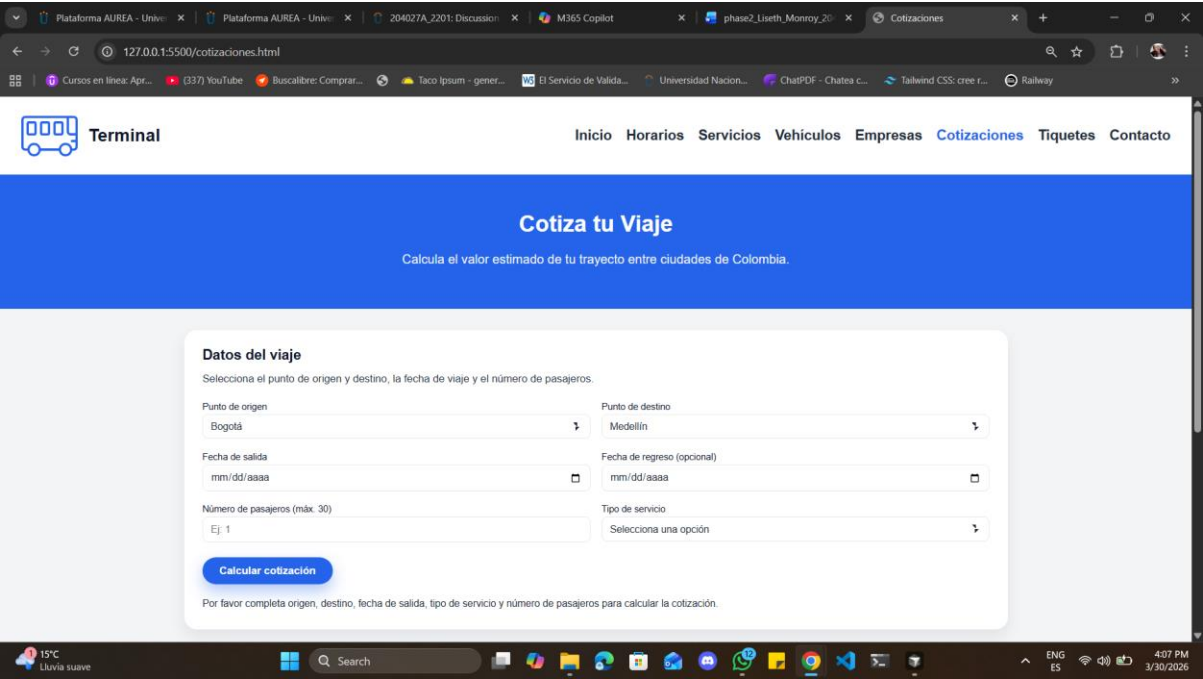

Table 12

Test Cases Terminal

Field	Validate maximum number of passengers in the quotation form
Test Case ID	TC-COT-012
Test Case Name	Passenger limit verification in the "Quotations" form

Objective	Perform tests to verify that the quotation form correctly validates the maximum number of allowed passengers
Preconditions	Access the terminal website; the user must be in the Quotations module
Test Data	Number of passengers: 31
Test Steps	1. Enter the terminal website 2. Go to the Quotations module 3. Select the origin 4. Select the destination 5. Enter the departure date 6. Enter a number of passengers greater than the allowed limit 7. Select the service type 8. Click the "Calculate quotation" button
Expected Result	The system must not allow entering a number of passengers greater than 30. If attempted, it must display a validation message or prevent the quotation calculation
Actual Result	The number of passengers entered was 31, and the system did not allow the quotation to be performed. It displayed the following message: "The maximum allowed number is 30 passengers."
Status (Pass/Fail)	Passed
Comments	Verify that the maximum passenger limit restriction works correctly

Test Evidence

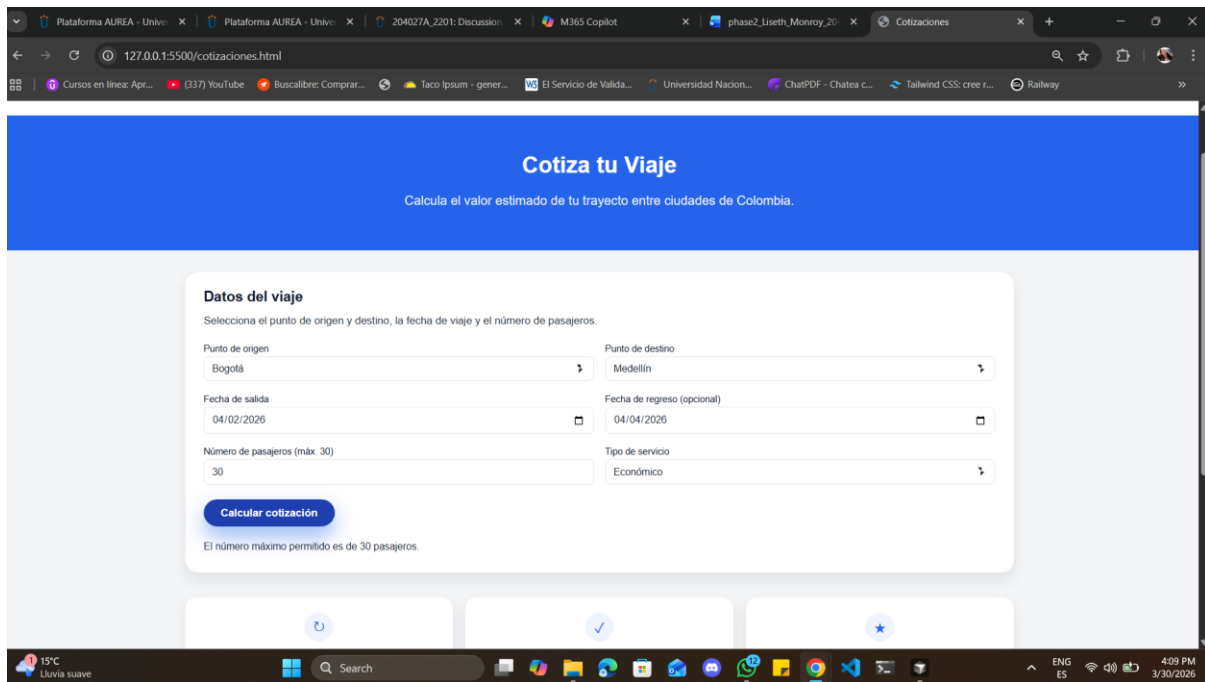

Table 13

Test Cases Terminal

Field	Verify the functionality of the travel search form
Test Case ID	TC-TIQ-013
Test Case Name	Travel search verification with valid data
Objective	Perform tests to verify that the system correctly displays available trips when valid data is entered
Preconditions	Access the terminal website; the user must be in the Tickets module
Test Data	Origin: Bogotá Destination: Cali Travel date: 04/22/2026 Service type: Premium Number of passengers: 5
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Select the origin 4. Select the destination 5. Enter the travel date 6. Select the service type

	7. Enter the number of passengers 8. Click the "Search Trips" button
Expected Result	The system must allow correct data entry in each form field When clicking the "Search Trips" button, the system must display the available trips according to the entered data
Actual Result	The system correctly displays the available trips according to the entered data
Status (Pass/Fail)	Passed
Comments	Verify that the results match the entered data

Table 14**Test Cases Terminal**

Field	Validate empty fields in travel search
Test Case ID	TC-TIQ-014
Test Case Name	Required fields verification in the "Tickets" form
Objective	Perform tests to verify that the system does not allow searching for trips when required fields are not filled
Preconditions	Access the terminal website; the user must be in the Tickets module
Test Data	Not applicable
Test Steps	1. Go to the Tickets module 2. Leave one or more fields empty 3. Click the "Search Trips" button
Expected Result	The system must not allow searching for trips when required fields are empty and must display a validation message or prevent the process from continuing
Actual Result	When clicking search without filling all required data, the system displays the message "Please complete all fields", preventing the process from continuing
Status (Pass/Fail)	Passed
Comments	Verify whether the system displays clear error messages

Test Evidence

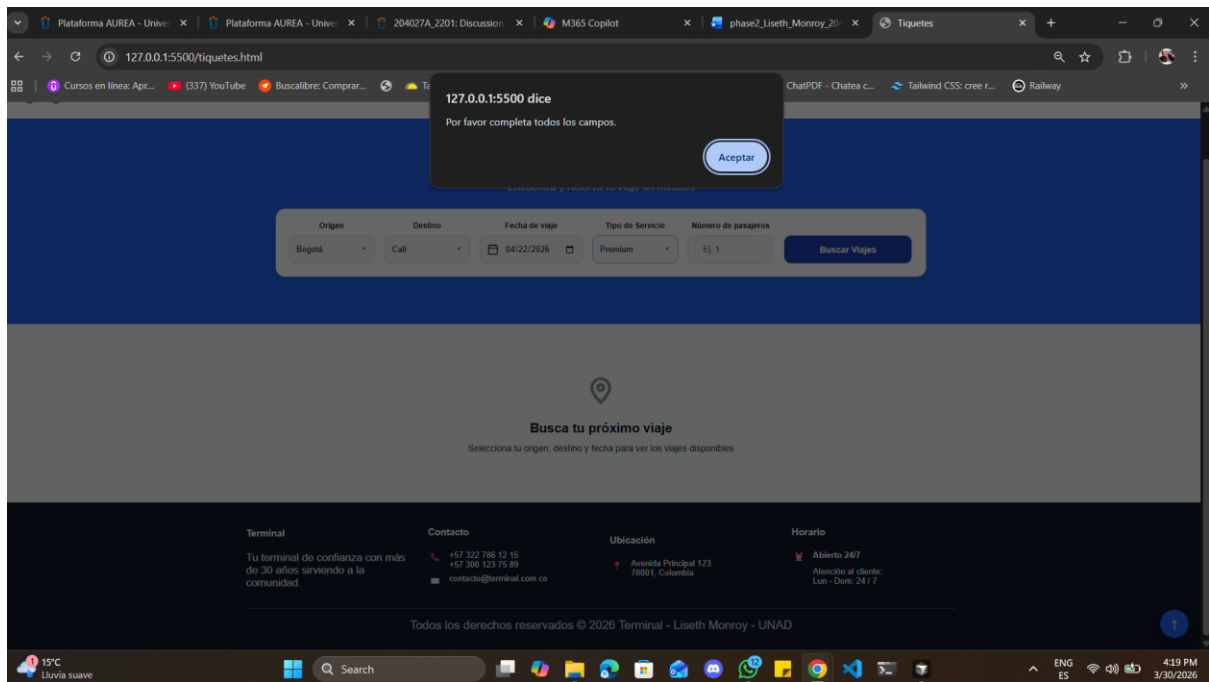

Table 15

Test Cases Terminal

Field	Validate passenger number in travel search
Test Case ID	TC-TIQ-015
Test Case Name	Passenger limit verification in the "Tickets" form
Objective	Perform tests to verify that the system correctly validates the allowed number of passengers
Preconditions	Access the terminal website; the user must be in the Tickets module
Test Data	Number of passengers: 0 or invalid value
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Select origin and destination 4. Enter the travel date 5. Enter an invalid number of passengers (0 or text) 6. Select the service type 7. Click the "Search Trips" button

Expected Result	The system must not allow invalid values in the passenger number field and must display a validation message or prevent the process from continuing
Actual Result	The system does not allow values such as zero or more than 30 passengers. If zero is entered, the system automatically changes it to 1, and if a value greater than 30 is entered, it automatically changes it to 30
Status (Pass/Fail)	Passed
Comments	Verify that only valid numeric values are allowed

Test Evidence

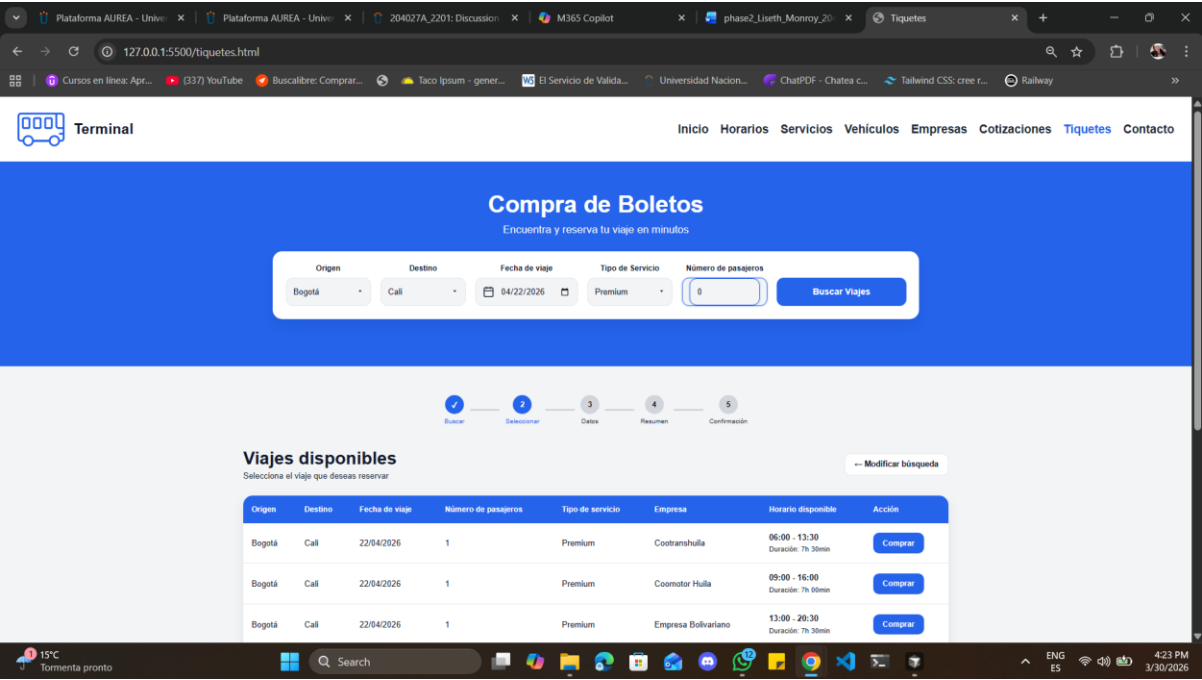

Table 16

Test Cases Terminal

Field	Verify origin and destination selection
Test Case ID	TC-TIQ-016
Test Case Name	City selection verification in the "Tickets" form

Objective	Perform tests to verify that the system allows correct selection of origin and destination cities
Preconditions	Access the terminal website; the user must be in the Tickets module
Test Data	Origin: Bogotá Destination: Bogotá
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Select the same origin and destination 4. Complete the remaining fields 5. Click "Search Trips"
Expected Result	The system should not allow selecting the same city as both origin and destination, or it should display a validation message
Actual Result	Bogotá was entered as both origin and destination, and the system displayed the message: "Origin and destination cannot be the same", preventing the process from continuing
Status (Pass/Fail)	Passed
Comments	Verify whether the system correctly handles this case

Test Evidence

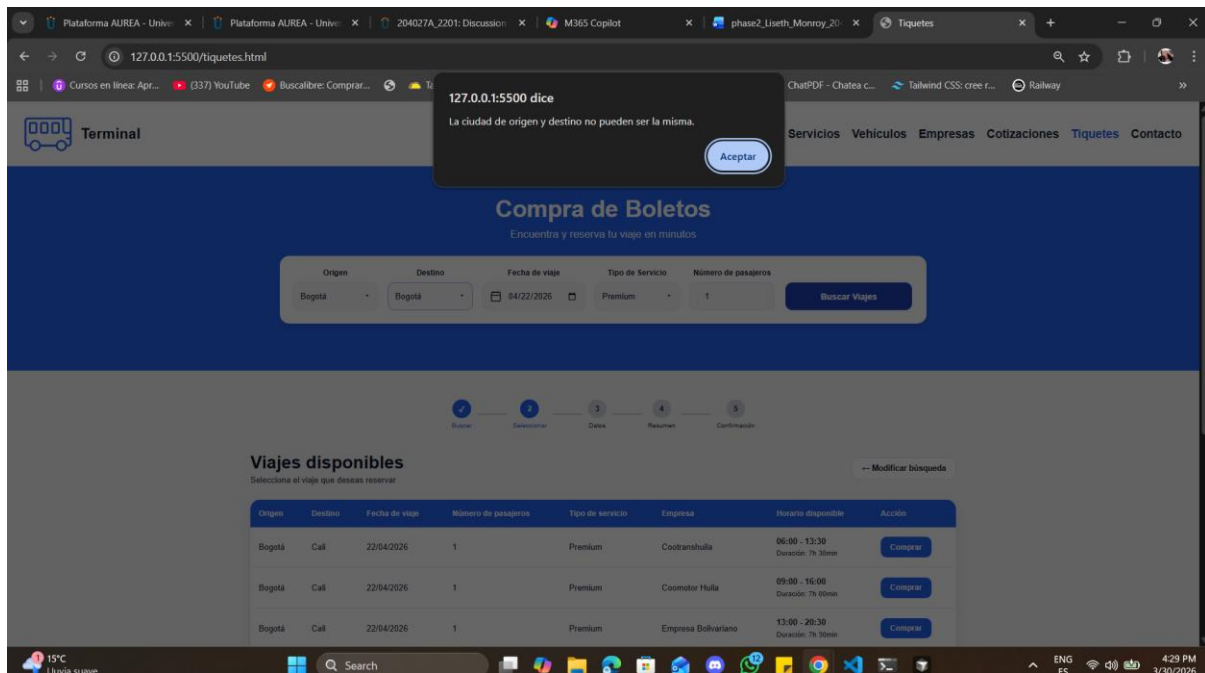

Table 17

Test Cases Terminal

Field	Verify display of available trips after search
Test Case ID	TC-TIQ-017
Test Case Name	"Available trips" table verification in the Tickets module
Objective	Perform tests to verify that the system correctly displays the table of available trips based on the entered search data
Preconditions	Access the terminal website; the user must be in the Tickets module and must have performed a search with valid data
Test Data	Origin: Bogotá Destination: Medellín Travel date: 04/22/2026 Service type: Premium Number of passengers: 5
Test Steps	1. Enter the terminal website 2. Go to the Tickets module

	3. Select the origin 4. Select the destination 5. Enter the travel date 6. Select the service type 7. Enter the number of passengers 8. Click the "Search Trips" button 9. Verify the "Available trips" table
Expected Result	The system must display a table with available trips according to the entered data The table must include information such as origin, destination, travel date, number of passengers, service type, company, available schedule, and a "Buy" action button
Actual Result	When the trip information is entered and the "Search Trips" button is clicked, a table is displayed with information such as origin, destination, date, company, service type, available schedules, price, and a "Buy" button
Status (Pass/Fail)	Passed
Comments	Verify that the information displayed in each row matches the entered search criteria

Test Evidence

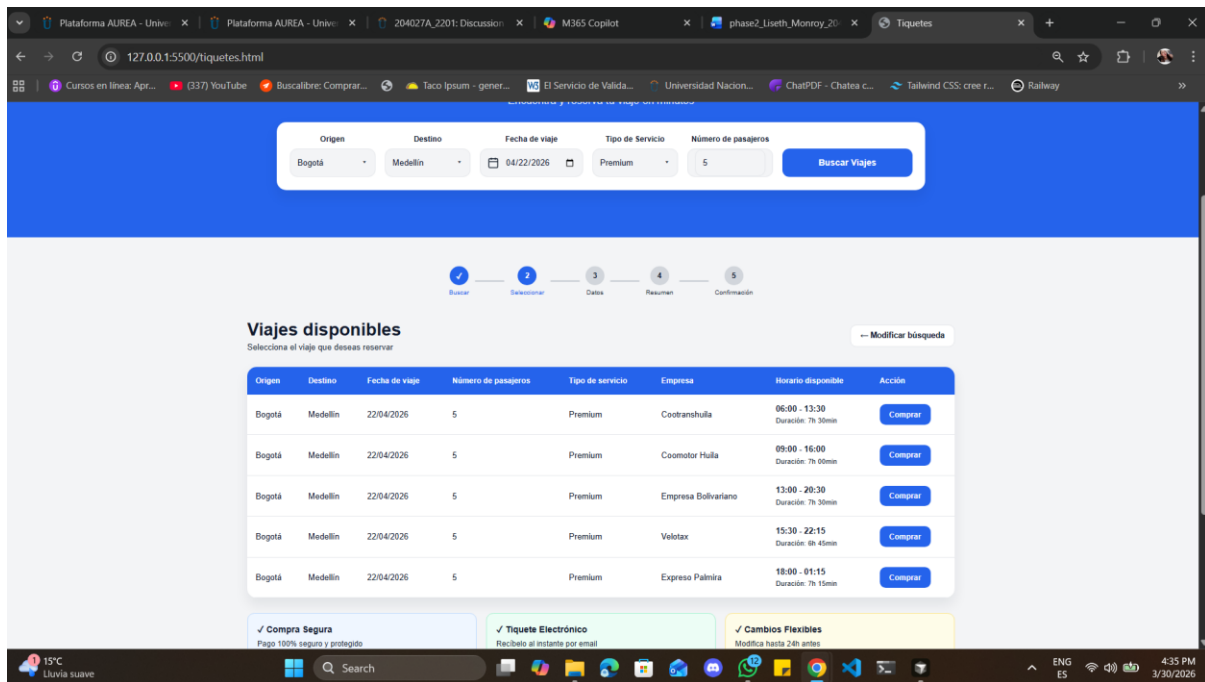

Table 18

Test Cases Terminal

Field	Verify functionality of the “Buy” button in the available trips table
Test Case ID	TC-TIQ-018
Test Case Name	Trip selection verification using the “Buy” button
Objective	Perform tests to verify that when selecting a trip using the “Buy” button, the system correctly redirects to the passenger data form
Preconditions	Access the terminal website; the user must be in the Tickets module and the available trips table must be visible
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Perform a trip search with valid data 4. Locate the “Available trips” table 5. Click the “Buy” button on any of the available options

Expected Result	The system must redirect the user to the Passenger Data section and display the corresponding form to enter the passenger’s personal information Additionally, the selected trip summary must be displayed on the right side
Actual Result	The system displays the corresponding form to enter the passenger’s personal information and shows the trip summary on the right side
Status (Pass/Fail)	Passed
Comments	Verify that the selected trip matches the information shown in the summary

Test Evidence

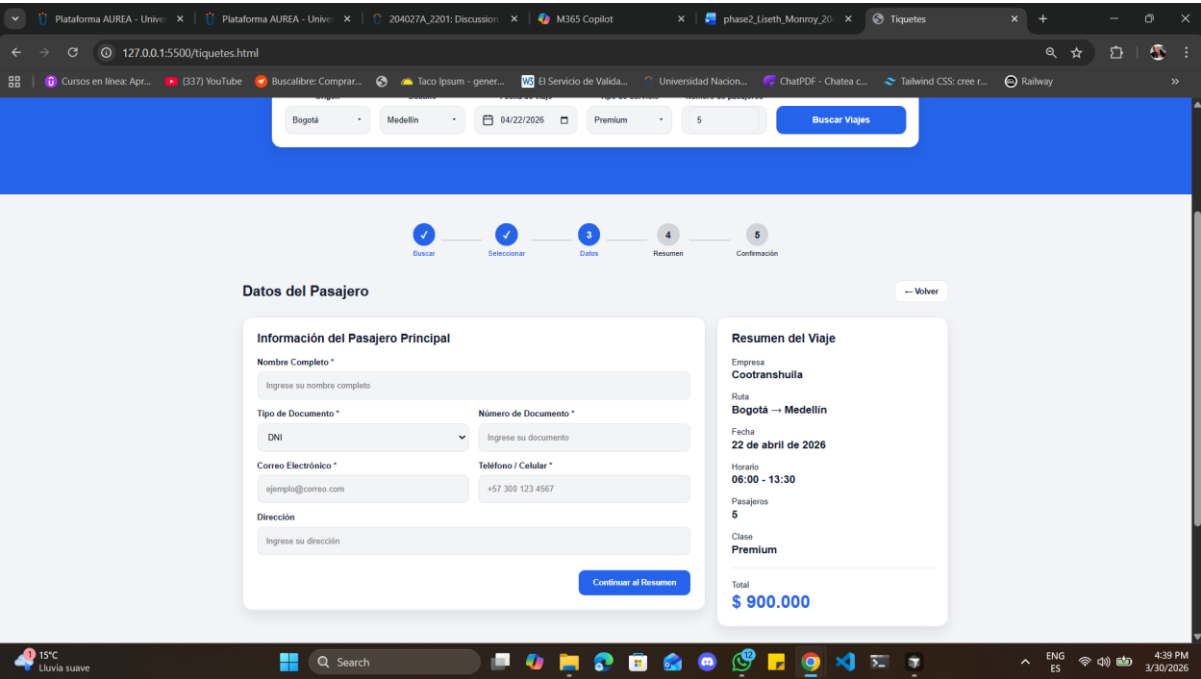

Table 19

Test Cases Terminal

Field	Verify required fields in the “Passenger Data” form
Test Case ID	TC-TIQ-019

Test Case Name	Required fields validation verification in "Passenger Data"
Objective	Perform tests to verify that the system does not allow proceeding to the summary when there are empty required fields in the passenger form
Preconditions	Access the terminal website; the user must have selected a trip and be in the Passenger Data section
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Perform a search with valid data 4. Select a trip using the "Buy" button 5. Leave one or more required fields empty in the form 6. Click the "Continue to Summary" button
Expected Result	The system must not allow proceeding to the summary if there are required fields not filled and must display a validation message or prevent the action
Actual Result	The system allows proceeding to the summary without filling in the required data; additionally, it does not display any validation to prevent the action and continues with the purchase
Status (Pass/Fail)	Failed
Comments	Verify whether the system correctly identifies required fields and displays clear messages

Table 20

Test Cases Terminal

Field	Verify correct data entry in the "Passenger Data" form
Test Case ID	TC-TIQ-020
Test Case Name	Correct form completion verification in "Passenger Data"

Objective	Perform tests to verify that the system allows correct entry of passenger data and proceeds to the summary
Preconditions	Access the terminal website; the user must have selected a trip and be in the Passenger Data section
Test Data	Full name: Liseth Dayana Monroy Briñez Document type: ID (CC) Document number: 1075320772 Email: lisethdayanamonroybrinez@gmail.com Phone / Mobile: 3229048474 Address: Calle 41 Sur #37-176
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Perform a search with valid data 4. Select a trip using the "Buy" button 5. Complete all passenger form fields correctly 6. Click the "Continue to Summary" button
Expected Result	The system must allow correct completion of all form fields When clicking "Continue to Summary", the system must proceed to the next step of the purchase process and display the corresponding summary
Actual Result	The form was completed correctly, and when clicking "Continue to Summary", the system proceeds to the next step of the purchase process and displays the corresponding summary
Status (Pass/Fail)	Passed
Comments	Verify that the entered data is not lost and that the process flow continues correctly

Test Evidence

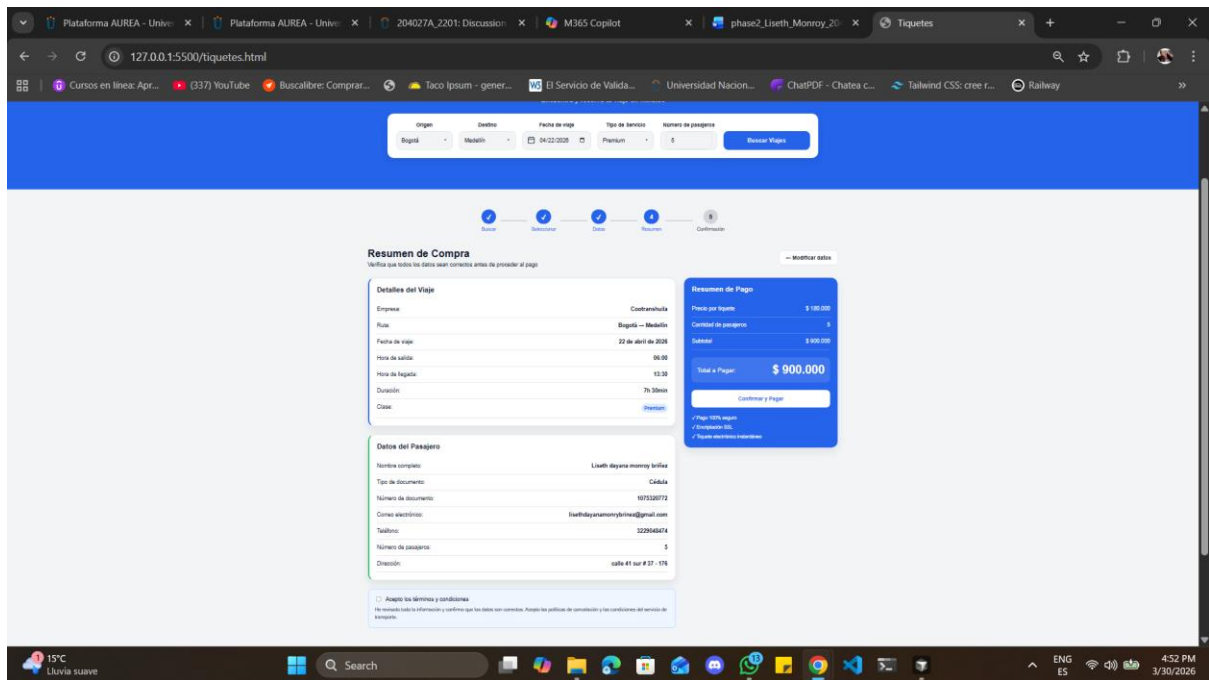

Table 21

Test Cases Terminal

Field	Verify display of the trip summary in the "Passenger Data" section
Test Case ID	TC-TIQ-021
Test Case Name	"Trip Summary" panel verification
Objective	Perform tests to verify that the system correctly displays the selected trip summary alongside the passenger form
Preconditions	Access the terminal website; the user must have selected a trip and be in the Passenger Data section
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Perform a search with valid data 4. Select a trip using the "Buy" button 5. Observe the "Trip Summary" panel

Expected Result	The system must correctly display in the summary the company, route, date, schedule, number of passengers, service class, and total amount to be paid according to the selected option
Actual Result	The purchase summary is correctly displayed with passenger data and trip information
Status (Pass/Fail)	Passed
Comments	Verify that the summary information exactly matches the selected trip

Test Evidence

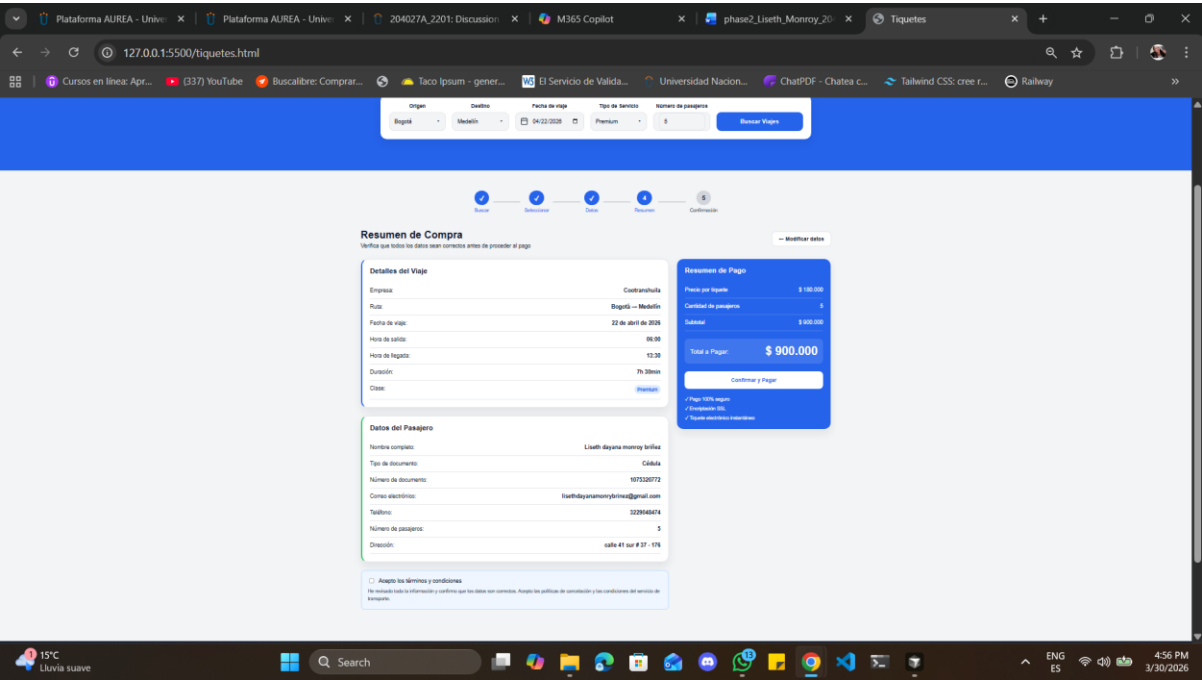

Table 22

Test Cases Terminal

Field	Verify functionality of the "Back" button in the "Passenger Data" section
Test Case ID	TC-TIQ-022

Test Case Name	"Back" button verification in the ticket purchase process
Objective	Perform tests to verify that the "Back" button correctly returns to the previous step without affecting the process flow
Preconditions	Access the terminal website; the user must have selected a trip and be in the Passenger Data section
Test Data	Not applicable
Test Steps	1. Enter the terminal website 2. Go to the Tickets module 3. Perform a search with valid data 4. Select a trip using the "Buy" button 5. Click the "Back" button
Expected Result	The system must return to the previous step of the purchase process, showing again the list of available trips or the previous screen without errors
Actual Result	The system correctly displays the previous pages without errors
Status (Pass/Fail)	Passed
Comments	Verify that returning to the previous step does not cause loss of flow or navigation errors

Test Evidence

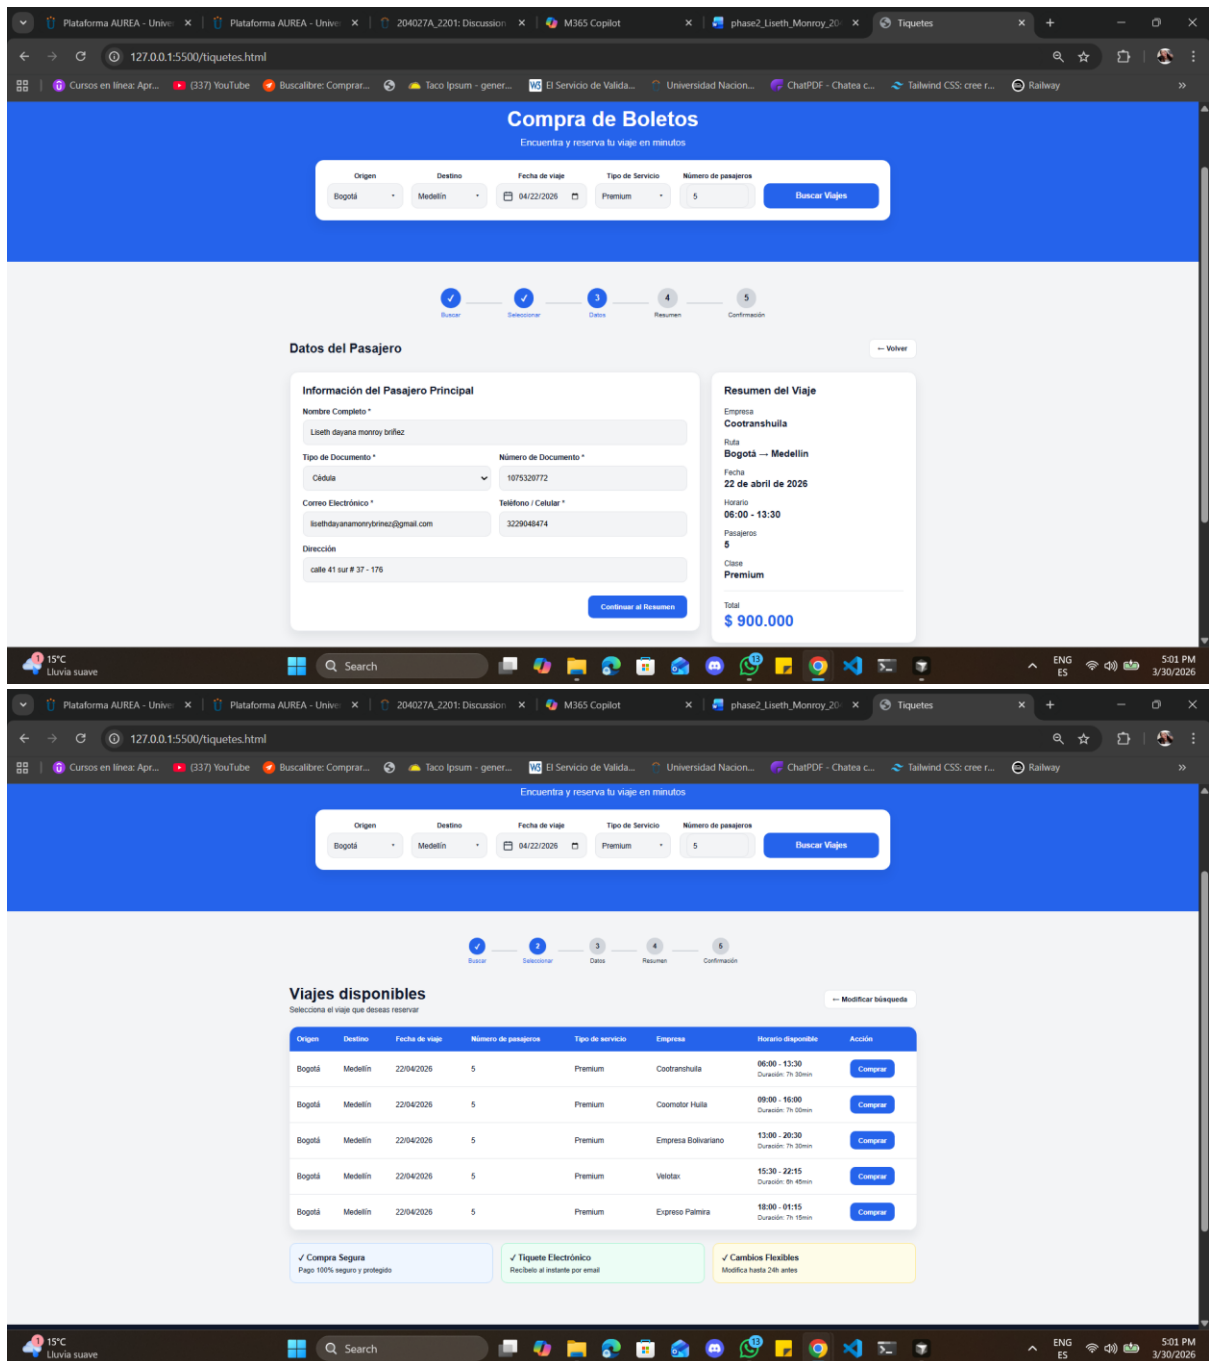

Table 23

Test Cases Terminal

Field	Verify display of the purchase summary
Test Case ID	TC-TIQ-023
Test Case Name	"Purchase Summary" screen verification

Objective	Perform tests to verify that the system correctly displays all trip and passenger information before confirming the payment
Preconditions	Access the terminal website; the user must have completed the passenger data and be on the Purchase Summary screen
Test Data	Previously entered trip and passenger data
Test Steps	1. Perform a trip search 2. Select a trip 3. Complete the passenger data 4. Click "Continue to Summary" 5. Observe the information displayed on the screen
Expected Result	The system must correctly display the trip details (company, route, date, schedules, duration, class) and the passenger data Additionally, the payment summary must be correctly displayed, including price per ticket, number of passengers, subtotal, and total amount to be paid
Actual Result	The system correctly displays the purchase summary
Status (Pass/Fail)	Passed
Comments	Verify that all information matches the previously entered data

Test Evidence

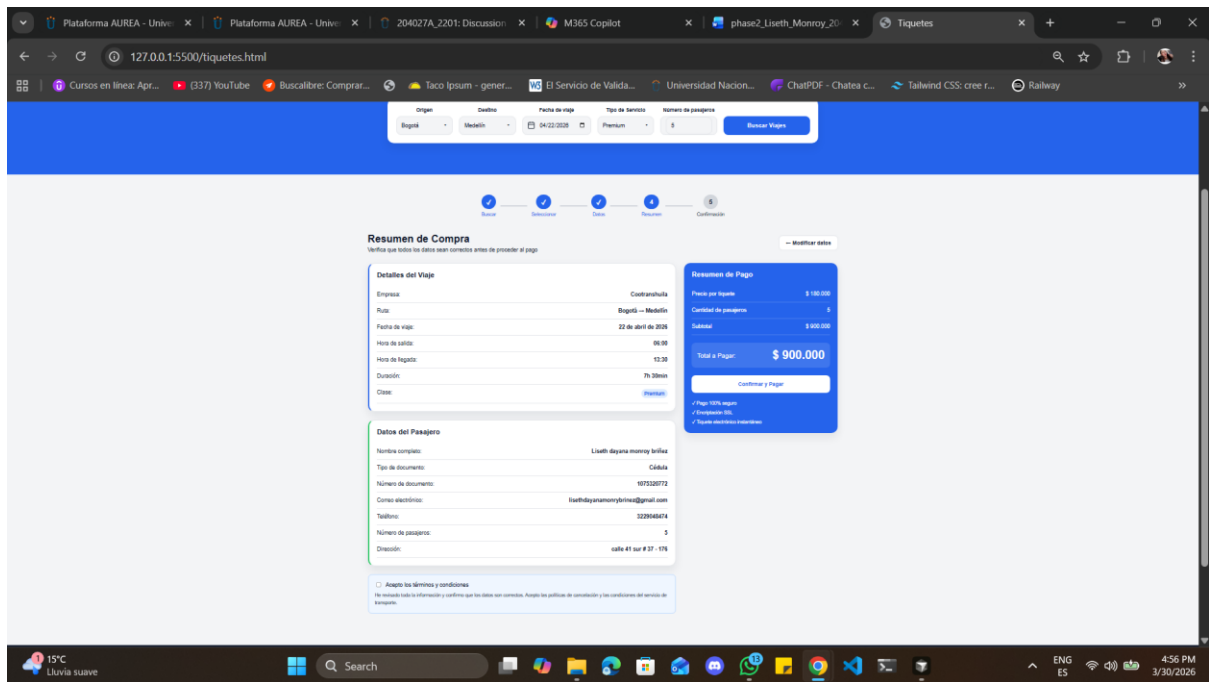

Table 24

Test Cases Terminal

Field	Verify acceptance of terms and conditions
Test Case ID	TC-TIQ-024
Test Case Name	Terms and conditions selection verification before payment
Objective	Perform tests to verify that the system requires the user to accept the terms before confirming the purchase
Preconditions	Access the terminal website; the user must be on the Purchase Summary screen
Test Data	Not applicable
Test Steps	1. Go to the summary screen 2. Do not select the option to accept terms and conditions 3. Click the "Confirm and Pay" button

Expected Result	The system must not allow continuing with the payment if the terms and conditions are not accepted, displaying a validation message or blocking the action
Actual Result	The system does not allow continuing with the process if the terms and conditions are not accepted, displaying the message: "You must accept the terms and conditions to continue"
Status (Pass/Fail)	Passed
Comments	Verify whether the system displays a clear message requesting acceptance of the terms

Test Evidence

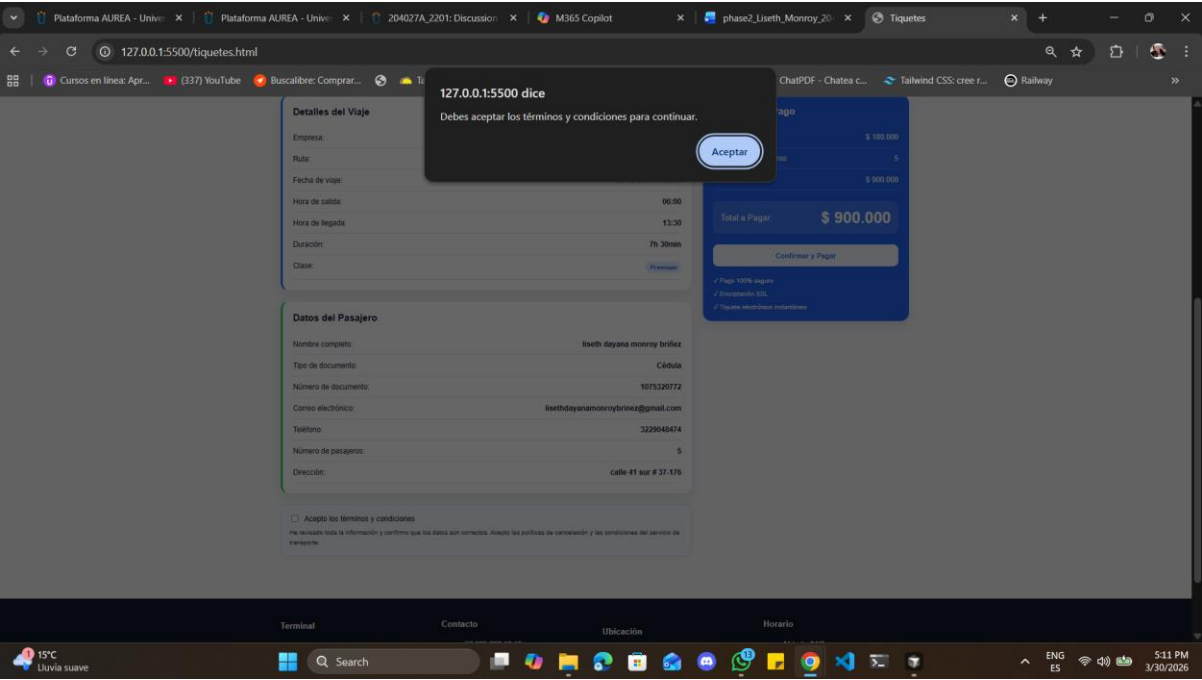

Table 25

Test Cases Terminal

Field	Verify purchase confirmation process
Test Case ID	TC-TIQ-025
Test Case Name	Purchase process verification when clicking "Confirm and Pay"

Objective	Perform tests to verify that the system correctly processes the purchase and redirects to the confirmation screen
Preconditions	Access the terminal website; the user must be on the summary screen and must have accepted the terms and conditions
Test Data	Valid data
Test Steps	1. Go to the summary screen 2. Accept the terms and conditions 3. Click the "Confirm and Pay" button
Expected Result	The system must correctly process the purchase and redirect to the confirmation screen, displaying a successful purchase message
Actual Result	The system correctly processed the purchase and redirected to the confirmation screen, displaying a successful purchase message
Status (Pass/Fail)	Passed
Comments	Verify that there are no errors during the process transition

Test Evidence

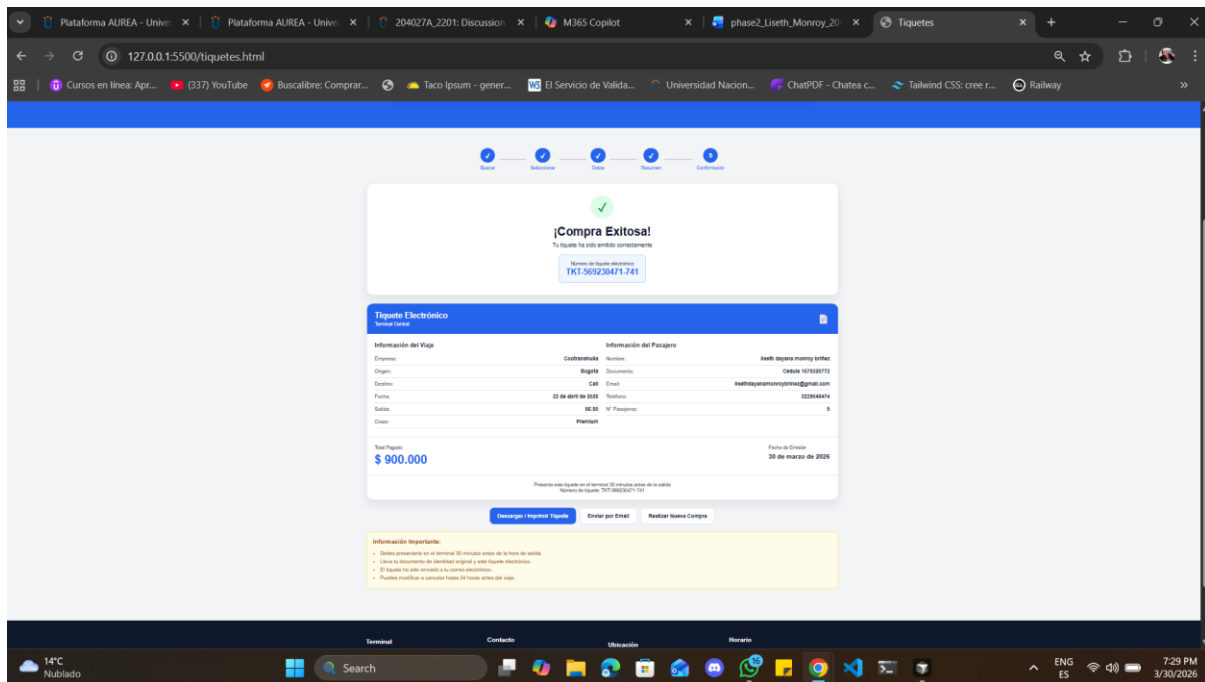

Table 26

Test Cases Terminal

Field	Verify electronic ticket generation
Test Case ID	TC-TIQ-026
Test Case Name	Electronic ticket generation verification after purchase
Objective	Perform tests to verify that the system correctly generates the electronic ticket after purchase
Preconditions	Access the terminal website; the user must have successfully completed the purchase
Test Data	Not applicable
Test Steps	1. Complete the purchase process 2. Observe the confirmation screen 3. Verify the generated ticket number
Expected Result	The system must display a "Purchase Successful" message and generate a unique electronic ticket number

	Additionally, the trip and passenger information must be displayed correctly
Actual Result	The "Purchase Successful" message is displayed, and a unique electronic ticket number is generated
Status (Pass/Fail)	Passed
Comments	Verify that the ticket number is unique and visible

Test Evidence

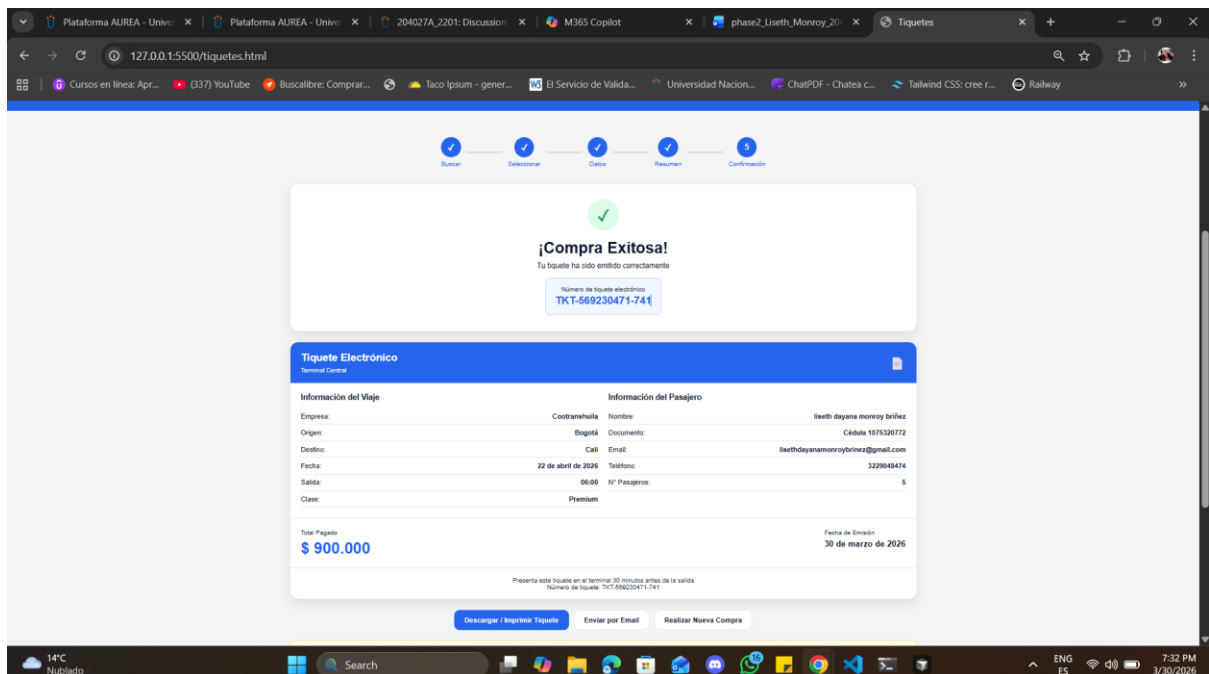

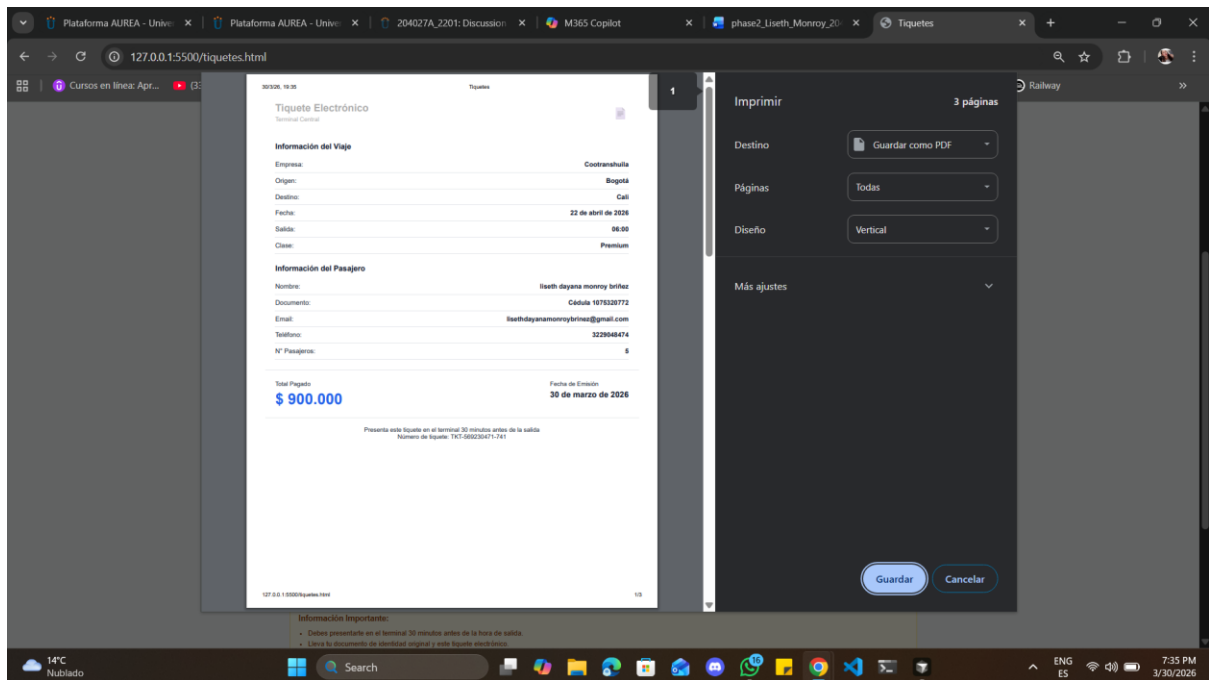

Table 27

Test Cases Terminal

Field	Verify electronic ticket functionalities
Test Case ID	TC-TIQ-027
Test Case Name	Electronic ticket options verification (download, send, new purchase)
Objective	Perform tests to verify that the electronic ticket options work correctly

Preconditions	Access the terminal website; the user must be on the confirmation screen with the generated ticket
Test Data	Not applicable
Test Steps	1. Complete the purchase 2. Locate the available options: 3. Download / Print Ticket 4. Send by Email 5. Make a New Purchase 6. Click on each option
Expected Result	The system must allow downloading or printing the ticket, sending the information by email, and starting a new purchase without errors
Actual Result	The system allows downloading and printing the electronic ticket and allows starting a new purchase, but the "Send by Email" button does not work properly; when clicked, no option appears to send the ticket by email
Status (Pass/Fail)	Failed
Comments	Verify that each functionality operates correctly without failures

Re: Discussion Forum - Phase 2 - Applying software testing techniques.
de LISETH DAYANA MONROY BRINEZ - miércoles, 25 de marzo de 2026, 09:56

Good morning tutor and classmates, I am sharing the details of the application to be tested.

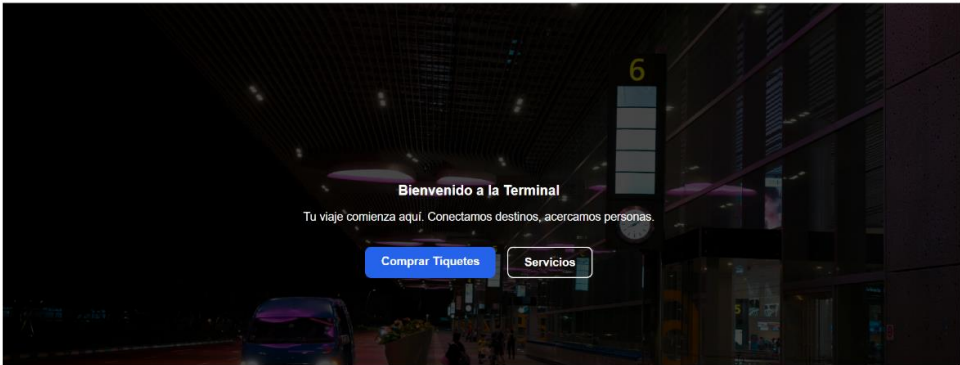

Application name: Terminal

Description: The Terminal website is a system developed so that users can view information about the terminal, the types of vehicles it operates, and the services it offers. Additionally, it allows users to get price quotes and purchase tickets, showing the different companies associated with the terminal and the prices depending on the selected category: economy, exclusive, or premium. This project was developed for Phase 2 of the Web Development course, implementing HTML, CSS, and JavaScript.

Re: Discussion Forum - Phase 2 - Applying software testing techniques.
de LISETH DAYANA MONROY BRINEZ - miércoles, 25 de marzo de 2026, 14:32

Good afternoon tutor and classmates, I am attaching my test plan. I remain attentive to any suggestions.

[PHASE2_LISETHMONROY_TESTPLAN.pdf](#)

[Enlace permanente](#) [Mostrar mensaje anterior](#) [Responder](#)

Conclusions

Through the development of the test plan applied to the “Terminal” web application, it was possible to systematically evaluate the behavior of the different system modules, such as quotations, ticket purchasing, contact form, and general navigation.

The execution of the test cases made it possible to verify that the system largely meets the expected functionalities, correctly validating the data entered by the user and displaying information in a consistent manner. Likewise, the importance of functional testing was identified to ensure software quality, improve user experience, and prevent potential system failures.

Finally, this process demonstrated that the implementation of a well-structured test plan is essential in software development, as it ensures that the application meets the required quality standards and adequately responds to the needs of the end user.
